CCR Beneficial Use Proposals Received

In accordance with Virginia Code § 10.1-1402.03(G)(2), this Report documents receipt and review of proposals to beneficially use any Coal Combustion Residuals (CCR) subject to the Code, but not covered by an existing contractual agreement, every four years beginning July 1, 2022. The proposals must provide information from which the Owner can determine:

- The amount of CCR that will be utilized for encapsulated beneficial use,
- The cost of such beneficial use, and
- The guaranteed timeframe in which the CCR will be utilized.

Dominion Energy has not received any proposals meeting all the above criteria since July 1, 2022.

Three proposals were received in 2022, but none met the above criteria and therefore are not included in this report. In addition, proposals and associated communications were marked as confidential or proprietary, and releasing any commercial terms could compromise efficiency of free market operation for both Dominion and the proposing entity.

Two of the proposals did not include encapsulated beneficial use and were not evaluated further. The third proposal was a conceptual plan for manufacturing concrete sand from the CCR and shipping to overseas export markets. This proposal did not meet the timeframe criteria and provided inconclusive costs, as summarized below.

Proposal	Date Received	Proposed Beneficial Use	Required Review Criteria			Review Notes
			Amount CCR Used	Cost	Guaranteed Timeframe	
A	July 1, 2022	Concrete sand	4 Mcy	Inconclusive	Not Provided	Conceptual Approach. Cost was inconclusive, does not appear to include dewatering, water treatment, site restoration, and other closure costs. (received for Possum Point site only)
