AT DOMINION ENERGY, we are committed to providing safe, reliable, and affordable electricity to the communities we serve. You are receiving this postcard because we are preparing to begin an improvement project at Gretna Substation in Pittsylvania County, Virginia.

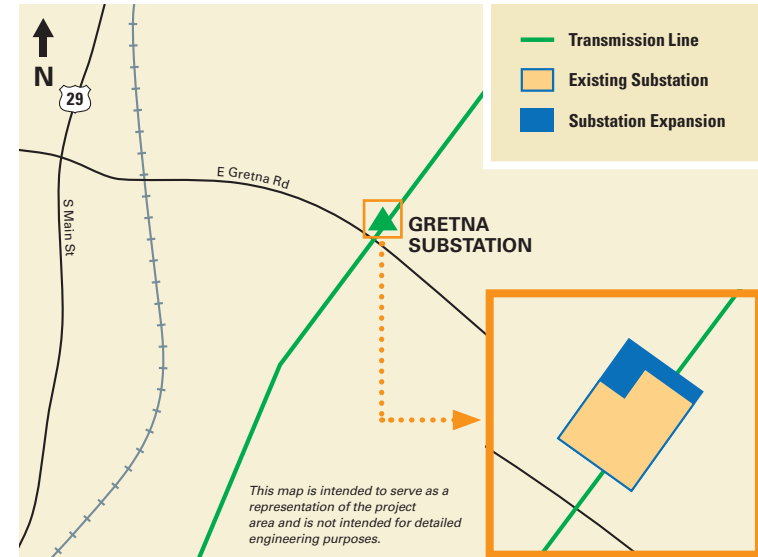

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve. Learn how we're keeping you safe at powerlines101.dominionenergy.com.

To create a more modern grid and mitigate the risk of extended outages for customers in the local area, we are planning to upgrade equipment and add a transformer to the existing Gretna Substation, which serves about 1,800 customers. As part of this project, we will expand the substation footprint on existing Dominion Energy property off East Gretna Road.

After all necessary permits and approvals are received, we anticipate construction to continue from fall 2023 through the end of 2024. You may see increased activity in the immediate area during construction.

We will update you as activities progress. We appreciate your patience and understanding as we work to enhance reliability in your community.

Voltage Islands

Dominion Energy is mitigating voltage islands, which are communities served by single-transformer substations who rely on mobile substations when outages occur. Adding additional transformers to these substations helps create redundancy on the grid and reduce outage restoration times for customers.
