MORE

Construction has recently begun, and we anticipate work to be completed by the end of 2024. Restoration activities will continue into 2025. You will see increased activity during this time, but we will be mindful of our presence and work to reduce impacts to neighbors.

This project is part of our Grid Transformation Plan, which will modernize the electric grid and better enable integration of renewable energy resources. The Metcalf Substation Grid Transformation Project will replace equipment originally installed in the 1970s. To accommodate new equipment, we will expand the substation footprint by approximately 60 by 140 feet on existing Dominion Energy property.

We appreciate your patience and understanding as we work to enhance reliability in your community.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.
