Westcott Substation Grid Transformation Plan Project

AT DOMINION ENERGY, we are committed to continually analyzing our energy infrastructure to provide safe, reliable, and affordable electricity to the communities we serve. You are receiving this postcard because we are preparing to upgrade technologies at our Westcott Substation in Fairfax County. These important improvements are in accordance with the Grid Transformation Plan filed with and approved by the Virginia State Corporation Commission.

PROJECT PRESENTATION

Mason District Land Use Advisory Committee
Tuesday, Feb. 28, 2023 • 7:30 p.m.

Mason District Governmental Center
6507 Columbia Pike, Annandale, VA 22003

The meeting will be held in the main conference room. A brief project presentation will be provided.

To create a more modern grid and enable successful integration of renewables and electric vehicle chargers, we are planning to update equipment originally installed in the 1950s at Westcott Substation. The substation's existing footprint will expand to the west to accommodate new equipment. All improvements will be on the existing substation property located off Rose Lane in Falls Church, VA.

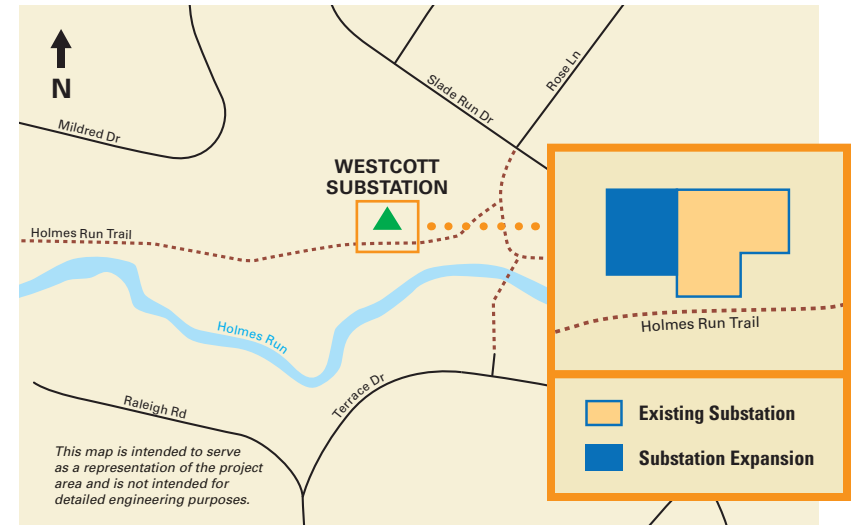

After all necessary permits are received, we anticipate construction activities lasting from fall 2023 to summer

2025. During construction, there will be times when temporary closures of Holmes Run Trail will be required to ensure public safety. We will make efforts to communicate these closures ahead of time and will post signs.

We will update you as activities progress. Thank you for your understanding as we work to enhance electrical reliability in your community.

SUBSTATION TECHNOLOGY DEPLOYMENT AND GRID TRANSFORMATION

Dominion Energy is modernizing substations by upgrading certain components which will help maintain voltage stability, improve reliability and power quality, and increase overall visibility of grid operations. Overall, this will help with outage response, renewable resource integration, and electric vehicle charging.
