September 1, 2026

Dear Neighbor,

Dominion Energy provides reliable energy that powers your every day. You are receiving this letter to **update you on a revised schedule for both forestry surveying activities and tree clearing** associated with the existing 500 kilovolt (kV) electric transmission lines between the Carson, Midlothian, and North Anna substations.

In late August, you were notified that forestry surveying activities were expected to begin by late summer 2026. **This forestry survey schedule has shifted; this work will occur in spring 2027. Tree clearing work will now begin in August 2027**, pending permits and weather conditions. This revised timeline both optimizes company resources and allows property owners more time to address right of way questions before clearing begins.

The existing electric transmission right of way is commonly at least 235 feet wide. Some previously unmaintained areas have trees and incompatible vegetation that must be removed now. Beginning in spring 2027, you may notice forestry surveyors on or near your property. Crews will use existing access routes to work in and near the right of way. They will be easily identifiable in their high-visibility safety vests.

Crews will work on foot or in light duty vehicles to mark the edge of the existing transmission easement. Forestry surveyors will leave yard stakes, small flags, or landscaping nails in the right of way. These markers will be orange and white. **Please do not remove these important markers.**

Crews will minimize disruptions to you as much as possible. Care is taken to avoid livestock. If you or guests on your property hunt or use guns for sport near the transmission line right of way, please let them know Dominion Energy crews will be present. This will help ensure a safe working environment.

After forestry surveys occur in spring, **you will be contacted by a Dominion Energy forester to coordinate necessary tree and vegetation removal on your property.** You can speak directly with the forester about the schedule and get answers to your property-specific questions. Tree and incompatible vegetation removal from the right of way is tentatively expected to begin in August 2027, pending permits and weather conditions.

Trees are an important part of your property, and we are dedicated to being respectful and providing as much information as possible. Your cooperation with vegetation safety regulations is appreciated. You can learn how safe electric corridors are maintained at [DominionEnergy.com/RightOfWay](https://www.dominionenergy.com/RightOfWay).

Respectfully,

The Electric Transmission Project Team
