Upcoming soil boring work in your community

Dooms-Charlottesville 230 kV Electric Transmission Rebuild Project

Dominion Energy is committed to providing the latest information on projects in your community. You are receiving this postcard because activities will begin soon to support the Dooms-Charlottesville 230 kilovolt (kV) Electric Transmission Rebuild Project.

MORE

From September 2026 through the end of November 2026, you may notice crews near your home accessing the right-of-way by truck and on foot. They will be conducting pre-construction activities such as soil boring tests.

These tests help ensure foundations will provide enough stability for electric transmission structures.

Testing includes marking areas and using large equipment to drill holes. During drilling, nearby neighbors may hear elevated noise levels. The soil will be sampled and assessed to test its makeup. After soil samples are taken, the holes will be refilled.

A video with detailed information about the soil boring process is available in the construction section on our learning portal at powerlines101.dominionenergy.com. Thank you for your patience as this important work is completed.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

Protecting the grid against natural and man-made acts is a top priority.
You can learn more about our commitment to safety at
powerlines101.dominionenergy.com.

UPCOMING WORK

September-November 2026

Crews will stake and mark areas within
the right of way

Large equipment will drill holes

Holes will be refilled once testing is complete
