## Goose Creek 500 kV Substation Expansion Project

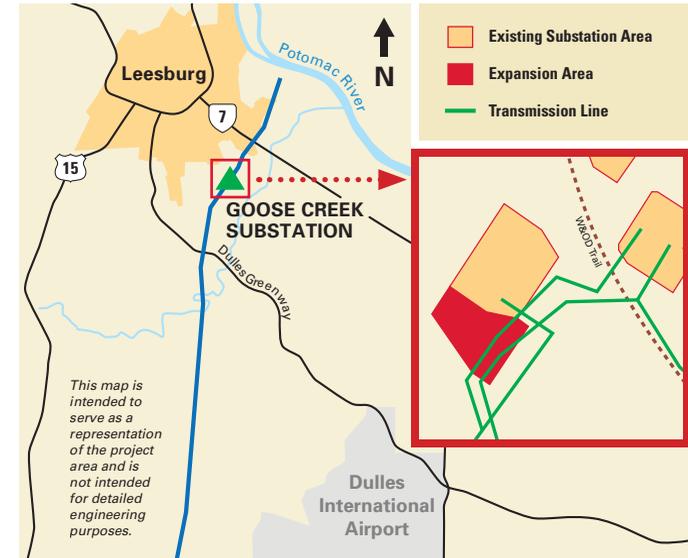

AT DOMINION ENERGY, we are committed to providing project updates to the communities we serve. You are receiving this postcard because we are currently preparing the site expansion area at our Goose Creek 500 Kilovolt (kV) Substation in Loudoun County, Virginia. Northern Virginia, especially Loudoun County, is experiencing increasing energy demands which is driving the need for additional capacity in the electric transmission system to ensure reliability and resiliency for all customers. The substation's existing footprint is expanding southward on Dominion Energy property to accommodate new equipment.

This project is on an expedited timeline to minimize duration of impact and place in service by the end of this year. Therefore, construction activities are occurring day and night.

This spring, site preparation includes rock excavation. **Rock excavation activities occur weekdays between 7:00 a.m. and 9:00 p.m. and on weekends between 9:00 a.m. and 9:00 p.m.** Neighbors in the area may hear noise during these hours resulting from rock excavation. Other site preparation activities continue overnight. **We expect to complete site preparation in June.**

The W&OD Trail is located northeast of our substation. Trail users will notice activity, but we do not anticipate any impacts to the trail as a result of this substation project.

Substation construction is expected to end in December 2023, weather-permitting. Thank you for your patience and understanding as we work to complete this critical reliability project.

## CONTACT US

Visit our website at [DominionEnergy.com/GooseCreekSub](https://www.dominionenergy.com/GooseCreekSub) for project updates. Or contact us by sending an email to [powerline@dominionenergy.com](mailto:powerline@dominionenergy.com) or calling 888-291-0190.

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve.
