Construction Update

Jeffress 230 kV Transmission Line Project

Dominion Energy is committed to letting you know about work in your community. You are receiving this postcard because a 230 kilovolt (kV) electric transmission line is being built that will span from Finneywood Substation to Jeffress Substation in Mecklenburg County, Virginia.

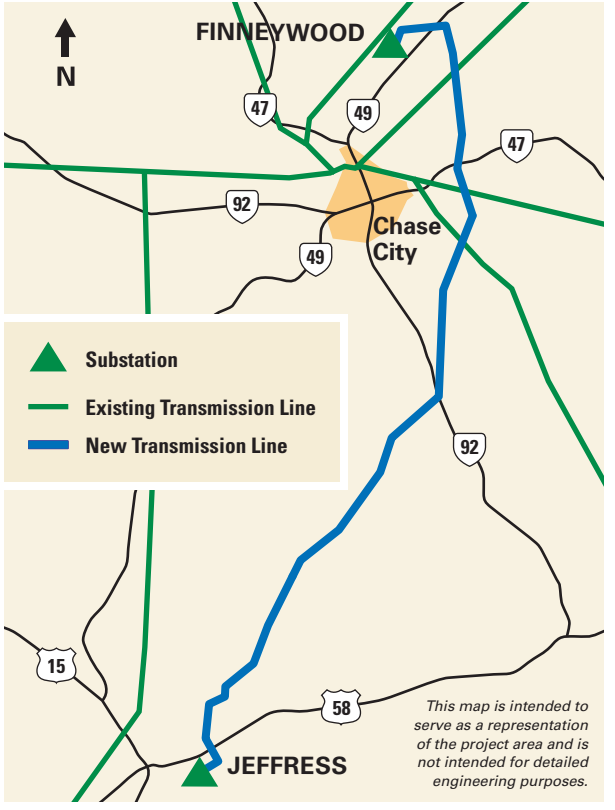

Due to unforeseen circumstances, the project timeline is delayed. Preconstruction activities for this project have begun for some parts of the project area and will continue through early 2027. During this phase, you may notice our contractors and crews in and around the right of way installing construction entrances and delivering equipment. You may also see our forestry crews removing or trimming trees that could pose a risk to the transmission line.

In other parts of the project area, construction will continue through fall 2027. Restoration activities will take place following construction and are expected to conclude in summer 2028. Visit the project website for the latest timeline.

Thank you for your patience as our crews work to provide safe, reliable, and increasingly clean energy to you and your community.
