Project Update

North Anna to Thornburg and Thornburg to Bristers Electric Transmission Projects

Dominion Energy would like to update you on the North Anna to Bristers project. The project will now be filed as two separate applications to the Virginia State Corporation Commission (SCC).

The southern portion, from the existing North Anna Substation to the proposed Thornburg Substation, will be filed with the SCC this fall. The northern portion, from the proposed Thornburg Substation to the existing Bristers Substation, will be filed separately in 2027.

TO LEARN
MORE

While the southern and northern portions of the project combined offer the most comprehensive, robust electrical solution, filing the applications separately will provide the Dominion Energy project team additional time to continue to review potential routes, technical requirements, and environmental considerations for the longer northern portion of the project.

The project website will have the latest updates. You are invited to visit the website to ask questions and share your feedback with the project team.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.
