MORE

The existing electric transmission line spans Caroline and Spotsylvania counties, Virginia, is approximately 21 miles long, and has been in operation for over five decades. Updating the structures and transmission line will help maintain your safe and reliable electric service. This work will occur within the existing right of way corridor; therefore, no new right of way is required. In May 2025, the Virginia State Corporation Commission (SCC) issued a final order, approving the project.

Construction will begin on Phase 1A, from Ladysmith Substation to Ladysmith CT, in early winter 2026. We will replace the existing conductor, or wires carrying electricity, with new conductor. The voltage will remain 230 kilovolt (kV).

In Phase 1B, the existing structures will remain in place. New monopoles structures, brown in color, will be installed using the existing right of way. Your service is not expected to be interrupted because of this project. We will continue to keep you informed as this project progresses. Thank you for your patience as this important work is completed.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.

PROJECT PHASES

PHASE 1 CONSTRUCTION

Ladysmith Substation to Junction Point

PHASE 2 CONSTRUCTION

St John's Substation to Junction Point
