Hathaway to Rocky Mount 230 kV Electric Transmission Line Rebuild Project

AT DOMINION ENERGY, we cut trees and brush adjacent to our rights of way (the areas around power lines) to maintain safe and reliable electric service for our customers. This practice also allows our crews quicker access to power structures during service restoration.

Danger trees are located outside the right of way but have potential to cause power outages to large areas. Trees and tree limbs that come in contact with electrical lines are a leading cause of power outages, especially during storms. You are receiving this postcard to inform you that our forestry team will be identifying danger trees in your area in April.

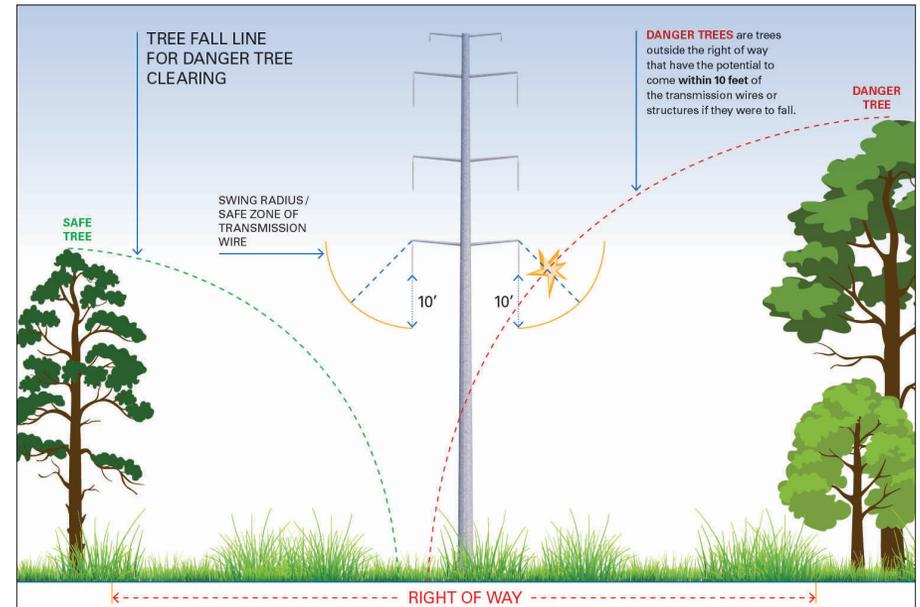

Clearing these trees is necessary to prepare for the Hathaway to Rocky Mount 230 Kilovolt (kV) Electric Transmission Line Rebuild Project. Construction is scheduled to begin in summer.

If we need to access your property to remove danger trees, our forestry team or authorized contractors will contact you in person or by mail. We are committed to working safely and courteously on your property.

CONTACT US — Visit our website at [DominionEnergy.com/RockyMount](https://www.dominionenergy.com/RockyMount) for project updates. Or contact us by sending an email to powerline@dominionenergy.com or calling 888-291-0190.

We understand trees are an important part of your property. Our team is dedicated to being respectful and providing as much information as possible regarding our danger tree removal process. We work hard to minimize our footprint while maintaining grid reliability and safety of the community. If you have questions or concerns about the right of way corridor, please email etrow@dominionenergy.com or call 800-215-8032.
