

Meeting Virginia's Energy Needs

**Dominion
Energy®**

Actions Speak Louder

Electric Transmission Line Planning and Approval Process

Relationships

- Value what the community values
- Seek available mutual benefits

Trust

- Discussion, connection and empathy
- Stakeholders' willingness to compromise

The Grid and Obligation to Serve

Forces Driving Infrastructure Need

Current System

Southside Infrastructure Enhancements Overview

South Hill Project Scope

Brunswick, Lunenburg, and Mecklenburg counties

- **Project Scope**

- Build two single-circuit 230 kV transmission lines parallel to one another on shared right of way into the South Hill/La Crosse areas
- Build three substations in South Hill/La Crosse
 - Build a connecting transmission line loop between the three proposed substations
 - Substations on data center property

South Hill Project Scope

Brunswick, Lunenburg, and Mecklenburg counties

- **Electrical Options (only building one of these options at this time – multiple routes within each option)**
 - **Eastern Solution:** Expand the existing Heritage Substation (Brunswick County) and construct approximately 25 miles of new transmission line corridor partially co-located with our existing 115 kV right of way
 - **Northern Solution:** Build a new substation, Unity Substation, along our existing 500 kV line (Lunenburg County) and construct approximately 10 miles of new right of way
- **Right of way needs**
 - ~120 feet wide

South Hill Typical Structures

Eastern and Northern Solution

Visualization is for discussion purposes only. Final design is subject to change pending public, engineering, and regulatory review.

South Hill Typical Structures

Substation Interconnects - Eastern and Northern Solution

Visualization is for discussion purposes only. Final design is subject to change pending public, engineering, and regulatory review.

Routing Considerations

Foundational Principles

- Process always begins with review of existing rights of way
- Respect the land use of the property owners
- Co-locate with other infrastructure, where appropriate
- Stay close to property boundaries
- Minimize impact on private property, and environmental, historic, cultural and scenic resources

- **Virginia State Corporation Commission (SCC):** Certificate of Public Convenience and Necessity
 - Alternatives Analysis
 - Routing Study
 - Department of Environmental Quality Supplement and coordinated review
- **U.S. Army Corps of Engineers**
- **Other Agency Review**
 - Department of Environmental Quality (DEQ)
 - Virginia Marine Resources Commission (VMRC)
 - Virginia Department of Transportation (VDOT)
- **Local Permitting Requirements**
 - Substations on Data Center property/part of developer's site plans
 - New Unity 500 kV/230 kV Substation for South Hill Northern electrical solution

Transmission Line Planning and Public Engagement Process SCC Application

Opportunities for public involvement throughout the process, including public hearings

Process could take as little as eight months to complete if uncontested, with more complex proceedings ranging from 12–24 months from start to finish

What's Next?

- Review routing options and speak to subject matter experts
- Another in-person community meeting later this summer once public input is received and incorporated into project planning
- For questions throughout the project, send an email to powerline@dominionenergy.com or call **888-291-0190**
- For more information and to access GeoVoice, please visit: [DominionEnergy.com/southhill](https://www.dominionenergy.com/southhill)

Thank you for joining!
