Tunis-Boykins 115 kV Transmission Line Rebuild Project – Phases 2 and 3 Open House

At Dominion Energy, we are committed to providing the reliable, affordable, and increasingly clean energy that powers your every day. To replace aging equipment and maintain reliable service for our customers, we have begun rebuilding an existing 115 kilovolt (kV) electric transmission line that spans from our Tunis Substation through our Mapleton Substation, Murphy Substation, and ends at our Boykins Substation.

We are about to enter Phase 2 of this project, from Mapleton Substation near Chowan University to Murphy Substation in the town of Murfreesboro. Preconstruction activities in this area are scheduled to take place from July 2025 to September 2025, with construction starting in September 2025. The overall project is scheduled to be complete in the spring of 2027.

During preconstruction activities, our crews will conduct forestry work on trees that are a danger to the line. We will also stage materials and install construction entrances.

To learn more about our construction process and this project, we would like to invite you to a community open house. Our subject matter experts will be on hand to answer any project questions you may have. We look forward to hearing your feedback.

We are dedicated to working safely and courteously in your community. Thank you for your patience while we complete this important reliability project.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.
