## **Proposed White Oak Electric Transmission Project**

Dear Neighbor,

At Dominion Energy, we are dedicated to keeping neighbors informed of projects in the communities we serve. You are receiving this letter because we would like to provide an important update to our proposed White Oak Electric Transmission Project.

On June 23, 2023, we filed an application with the Virginia State Corporation Commission (SCC). In the filing, we identify one proposed route and two alternatives. Our proposed route in the filing is Route 3, also known as the yellow route. The proposed route was determined after extensive community outreach and studies of environmental, historical, and cultural resources in the area. Additionally, we gave key consideration to planning a route that best supports the area's near and long-term plans.

As a reminder, the SCC has jurisdiction over routing of this electric transmission line and will review the entire application before determining the final route. The SCC review process includes time for public comments and public hearings. Enclosed you will find a document that explains how to view the application, participate in the SCC process, and follow the project's next steps.

Our team would like to thank each community member who attended our community meetings, contacted our team, or met with us individually to improve our understanding of the area and the impacts to your community. We appreciate your patience as our team reviewed all options prior to filing our application. Our commitment to community engagement does not end with our application; we will keep you informed throughout the SCC process and construction. Please do not hesitate to reach out to our team with questions.

Visit our website [DominionEnergy.com/whiteoak](https://www.dominionenergy.com/whiteoak) to view our filed SCC application, documents about the project, recordings of previous community meetings and more. You can also contact our project team by email at [powerline@dominionenergy.com](mailto:powerline@dominionenergy.com) or by phone at 888-291-0190. Thank you for your understanding while we plan for long-term reliability investments in your community.

Sincerely,

The Electric Transmission Project Team

Enclosure: SCC FAQ and Project Overview Map

**White Oak Electric Transmission Project**  
**Virginia State Corporation Commission (SCC)**  
**Frequently Asked Questions (FAQ)**

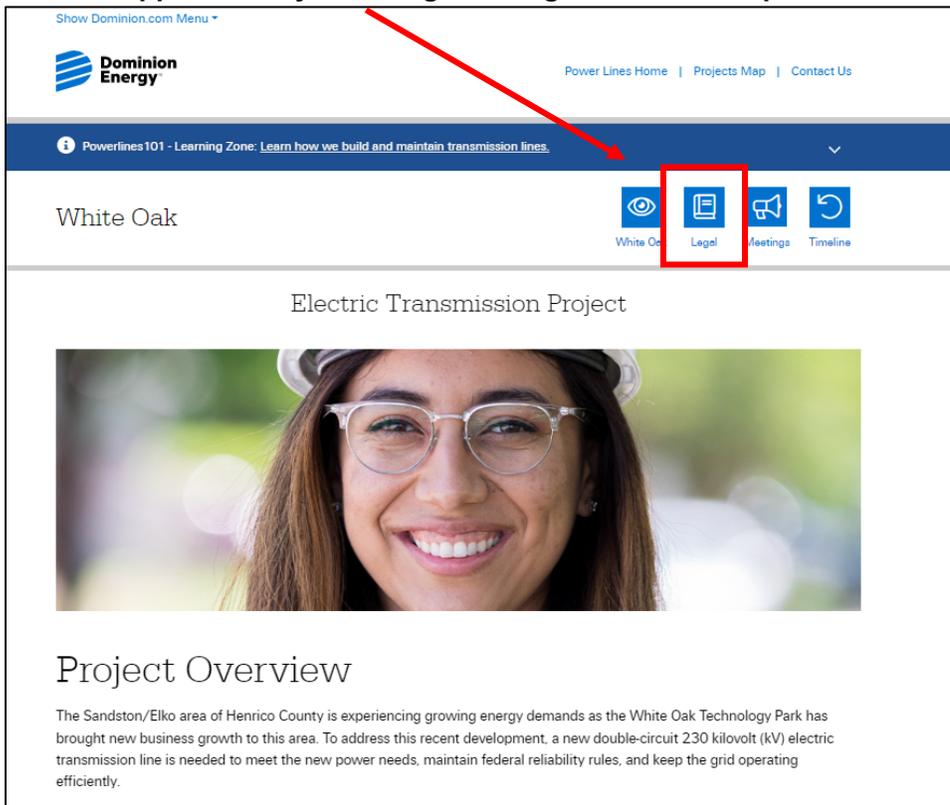

**1. How can I follow the SCC process?**

Key documents associated with the project can be viewed on our project website. Visit [DominionEnergy.com/whiteoak](https://DominionEnergy.com/whiteoak) and select the “Legal” tab at the top of the page. Here, you can find the information needed to access all case documents, including the case number, application, and a link to the SCC’s Case Docket Search page. Dominion Energy will host some case documents on our project website, such as the filing, the hearing examiner report, and the final order. To view every filed document with the case, visit the SCC Case Docket Search.

**Case number:** PUR-2023-00110

**Filing name:** 230 kV Elmont-White Oak Line #2075, 230 kV Chickahominy-White Oak Line #2294, and White Oak Substation Expansion

**View the application by selecting the “Legal” tab at the top of our website.**

**2. What is included in the SCC application?**

The SCC application includes a routing study, need for the proposed project, description of the proposed project, impact of the transmission lines on scenic, environmental, and historic features, the health aspects of Electromagnetic Fields (EMF), Environmental Justice studies, community outreach, and more.

**3. How did Dominion Energy select the “proposed” routes?**

To the greatest extent possible, the proposed route minimizes impacts to private property, the community, environment, and historical and cultural resources. As part of our SCC application, all impacts are captured in our routing study. We also considered length, public feedback, constructability, cost, the time to construct, and more. The SCC will take all the evidence provided in our application and will ultimately select and approve the final route.

**4. Is community feedback taken into consideration when selecting the proposed routes?**

As part of our commitment to working with the community, Dominion Energy held two in-person public meetings. We conducted individual meetings at the request of interested community members to review transmission line route options. Feedback was also solicited through GeoVoice, an interactive mapping tool available on the project website, where community members can review the route options and share feedback. This feedback was captured, analyzed, and where possible, incorporated into the routing options.

**5. What is the next step after filing?**

The SCC will issue an Order for Notice and Hearing and procedural schedule. This typically occurs a few weeks after our application is filed. The Order for Notice and Hearing will outline the Company's additional public, government official, and landowner notice requirements as well as establish a procedural schedule for party submissions, public participation, and a hearing.

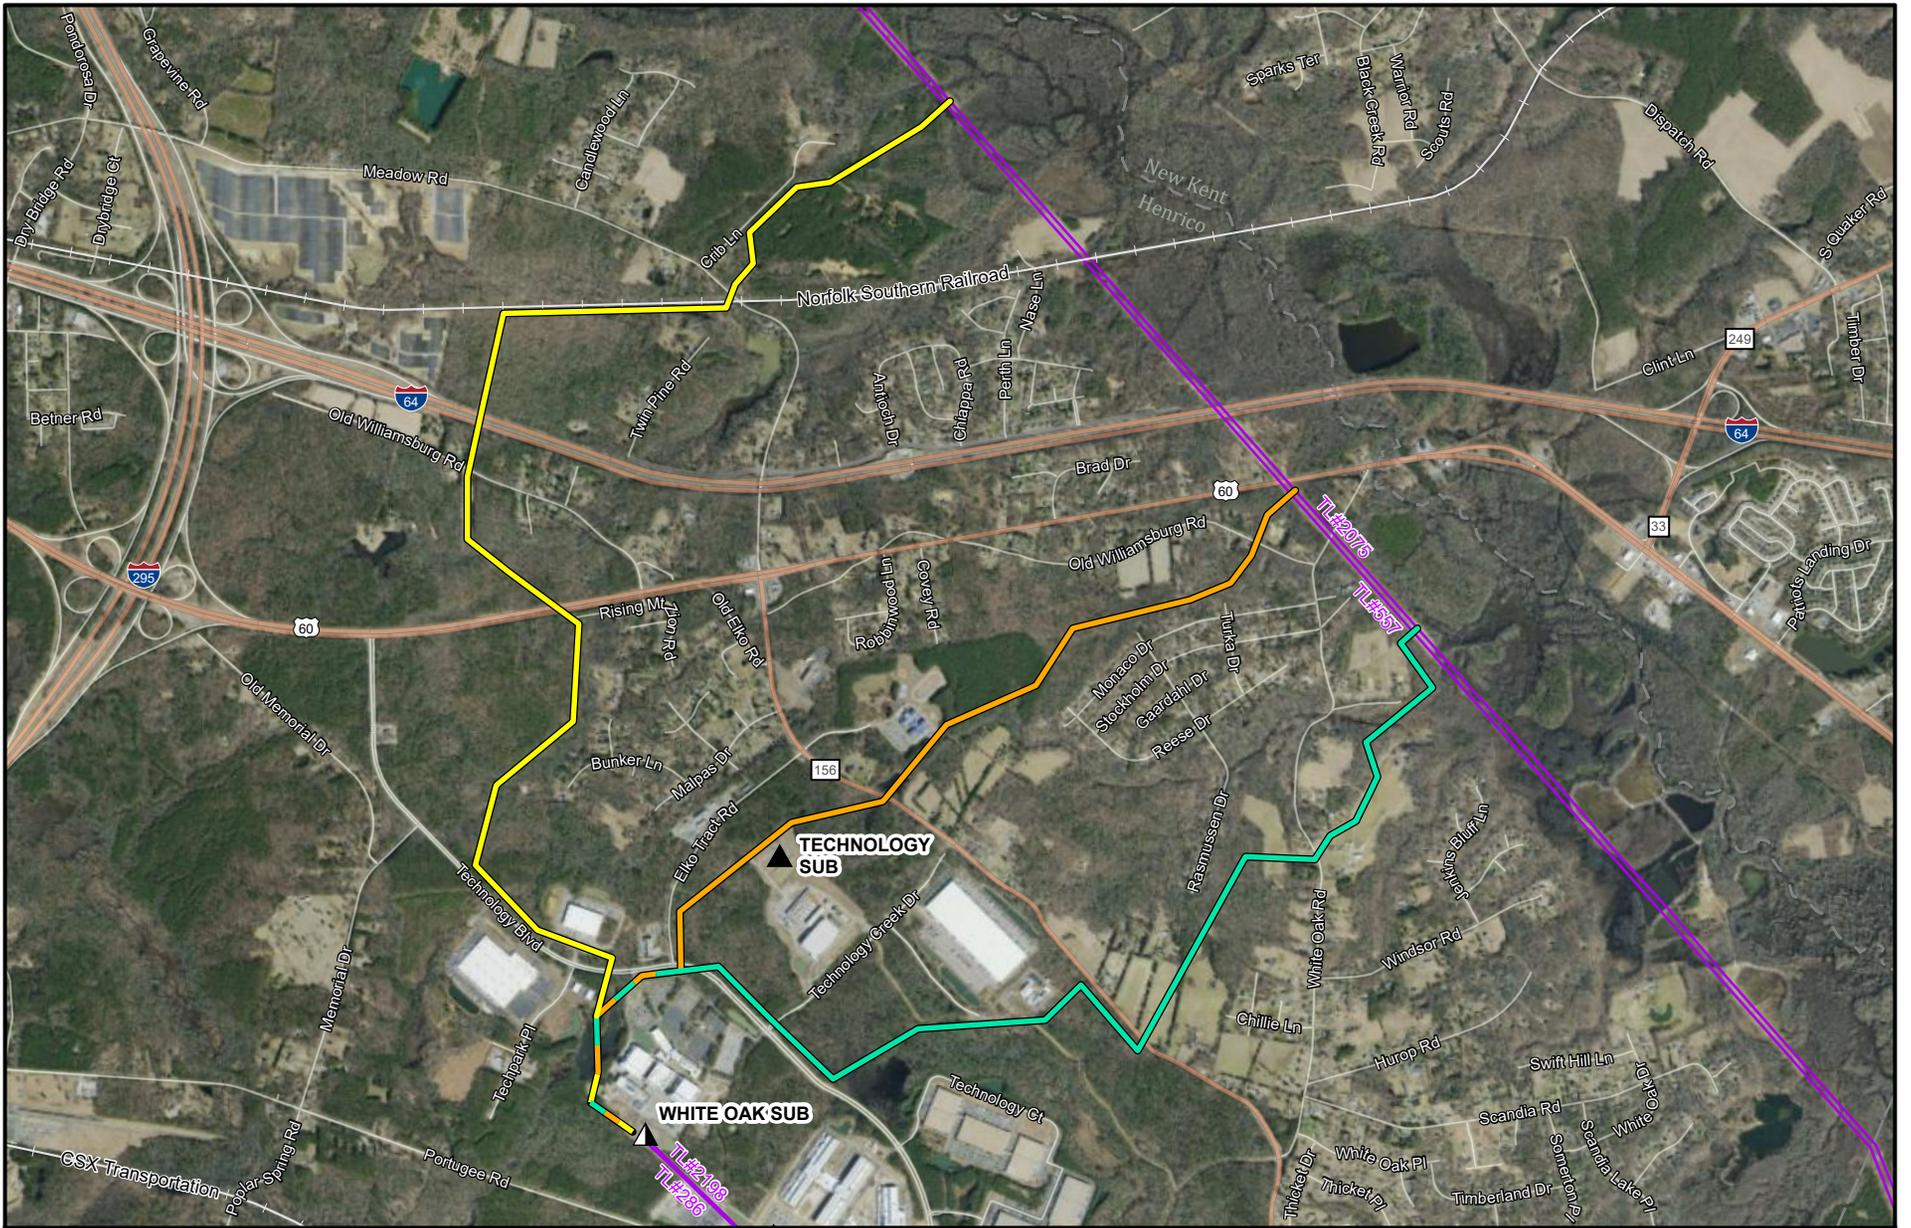

**6. What happens once the SCC selects the final routes?**

The SCC will issue a final order after completing a review of Dominion Energy's application. If a need for the project is demonstrated, the SCC will select a route to construct. Property owners near the selected routes will be notified. We will continue to keep the community informed of the construction schedule and the easement acquisition process.

**7. How long does the SCC process take?**

The SCC approval process typically takes about one year but varies depending on project details. In our application, Dominion Energy requested a final order by March 1, 2024. Depending on the length of their process, the SCC may not issue a final order by this date.
