Yadkin-Fentress 500 kV Electric Transmission Project

At Dominion Energy, we provide the reliable, affordable, and increasingly clean energy that powers your every day. To maintain reliability and integrate new electric generation with the grid, 13.5 miles of a 500 kilovolt (kV) transmission line is being replaced by two 500 kV lines between our Yadkin and Fentress substations in the City of Chesapeake, Virginia.

You are receiving this postcard to update you on foundation installation in your community. You may feel vibrations, sense high or low frequency hums, hear metal rattling from the worksite, see tall pieces of equipment at work, and household items (windows, delicate or elevated pieces) may rattle. Vibration levels are independently monitored during construction to help us proactively mitigate disruptive activities.

While installing one foundation near Corby Glen Avenue, our crews encountered soil conditions that require auguring. To modify the foundation, equipment will enter the right of way from the construction entrance on Broadwinsor Crescent. This foundation will be complete by April 2026. The remaining vibratory caisson foundations are expected to be completed by April 2026.

The multi-pile foundations in your area are scheduled for completion between April and June 2026. You can see which foundation type is nearest to you and explore the construction timeline at the Interactive Project Map on the project website.

Poles and lines will be installed this spring and summer. A helicopter will help install new lines. Construction is expected to finish in fall 2026, followed by restoration of the right of way.

Thank you for your patience as this critical infrastructure is completed to deliver reliable power for you.
