Zeus 230 kV Electric Transmission Project

APPOMATTOX, PRINCE EDWARD AND CUMBERLAND COUNTIES, VIRGINIA

Dominion Energy®
Powering Your Every Day.℠

DOMINION ENERGY is committed to providing the reliable, affordable and increasingly clean energy that powers your everyday. The Zeus 230 Kilovolt (kV) Electric Transmission Project proposes to build new electric infrastructure in Appomattox, Prince Edward and Cumberland Counties. This project includes:

- **A new substation located in Appomattox**
- **A new, 230 kV double-circuit transmission line connecting the new substation to existing infrastructure**
- **New right of way (ROW): 100ft**

This new infrastructure will allow Dominion Energy to meet the Piedmont region's growing energy needs, support continued reliability and operation flexibility throughout the electric grid.

PROJECT SCHEDULE

SUBJECT TO CHANGE

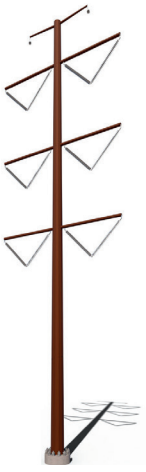

DATE	ACTIVITY
September 2026	Project announcement
November 5, 2026 January 2027 – Farmville	Community meetings
Early 2027	File application with the Virginia State Corporation Commission (SCC)
Early 2028	Anticipated SCC ruling
Early 2029	Construction to begin
Late 2030	Construction complete

PROPOSED STRUCTURE TYPE

Type: Double circuit 230 kV monopole

Proposed Average Height: 120 ft

Utilizes existing 100 ft right of way

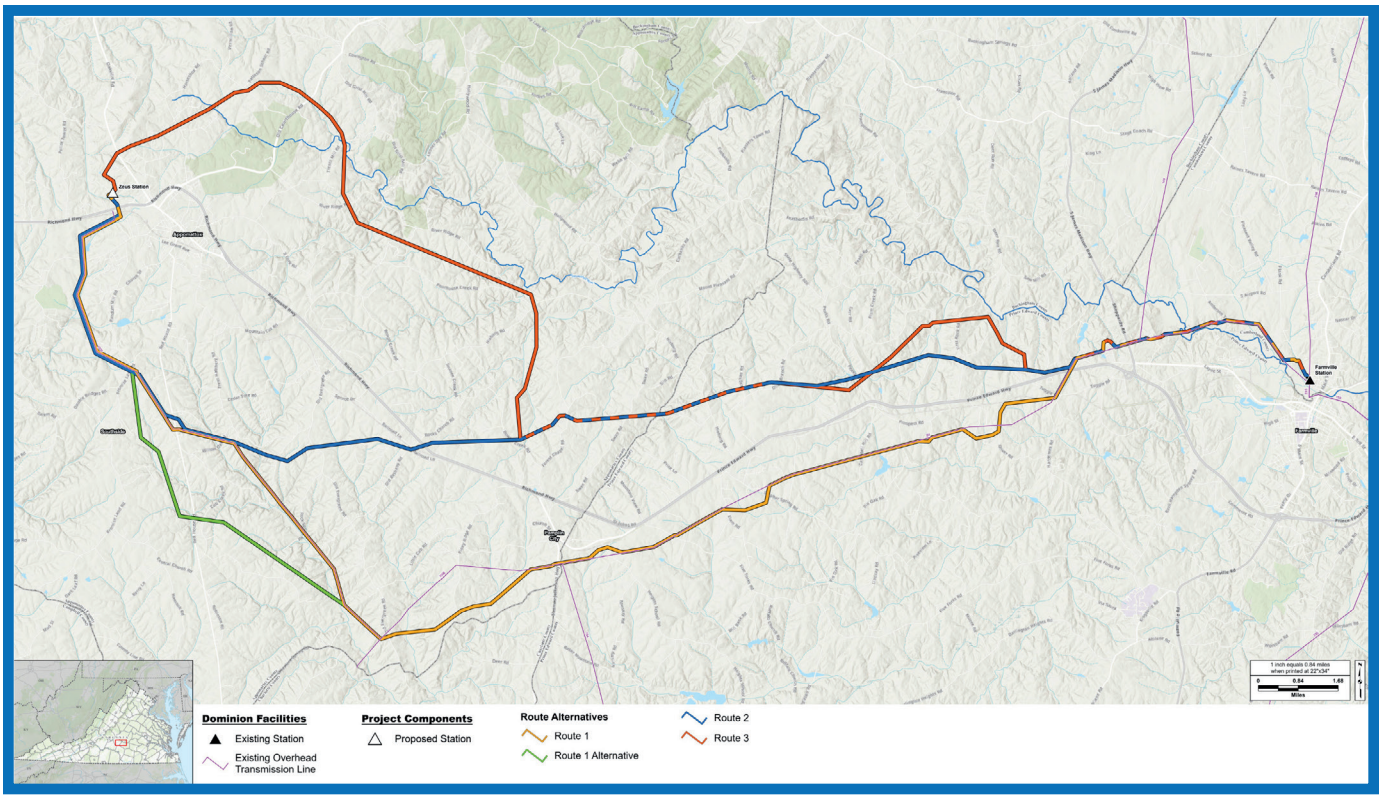

ROUTING AND APPROVAL

Planning an electric transmission route is one of the most challenging processes at Dominion Energy. To avoid or lessen community impacts, multiple factors are considered when deciding where to build a new line, such as:

- **Land use**
- **Historic and cultural resources**
- **Environmental disruption**

The SCC is the regulatory body that will review the necessity of the project and ultimately choose the route the company must build. While they are the primary agency reviewing and approving the project, there may be additional permits needed from various agencies. Once filed, our application and associated documents are available to view on the legal sections of the Zeus project website.

Zeus 230 kV Electric Transmission Project CONTINUED

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

LEARN MORE

- The area currently under consideration for the new transmission line will begin at our existing Farmville Substation in Farmville and continue to the proposed Zeus Substation in Appomattox.
- The routes shown are in the early stages of the project and subject to change.
- Dominion Energy will study and review multiple route options — **one** proposed route along with alternative routes will be filed with the SCC.
- Only **one** route will be selected to construct.

YOUR FEEDBACK MATTERS

These routes have not been finalized — we want to hear your input on the proposed routes! The purpose of our public engagement is to share, listen and learn! The SCC also considers public input in its review process. There are multiple ways to share your feedback with our team:

- **Complete a feedback form at the community meeting.**
- **Contact us by email at powerline@dominionenergy.com or by phone at 888-291-0190**
- **Leave your comments on our interactive mapping tool, which is available on our project website DominionEnergy.com/Zeus**
- **Invite us to your community or property!**
