

Smart Grids – What's Next Transcript

What if there were fewer power outages and when the lights did go out they came back on even faster? At Dominion Energy we're moving from what-if to what's next. Here's how. Our investments in new technology and infrastructure will help build a smart grid that can detect, restore, and even prevent power outages. Smart meters can help when power is knocked out. We'll know whether your house has power or not in real time- before you even call us. With this technology, intelligent grid devices identify the location of an outage and reroute power automatically, so you can go on with your day. Not only will outages affect fewer customers our crews will know precisely where to go and address the remaining power outages faster. Fewer outages, faster restoration. Dominion Energy.
