Langley 230 kV Substation Project

Use your iPhone camera or the QR reader app on other smartphones to visit the project page on our website.

AT DOMINION ENERGY, we are committed to continually reviewing and analyzing our energy infrastructure to provide safe, reliable, and affordable electricity to the communities we serve. You are receiving this postcard because we are proposing to build a new 230 kilovolt (kV) substation next to our existing Peninsula Substation in the City of Hampton, Virginia. As part of this project, we need to rebuild short portions (0.1 to 0.4 miles) of the existing 115 kV and 230 kV electric transmission lines southeast of the intersection of Neil Armstrong Parkway and Commander Shepard Boulevard to accommodate the new substation footprint. This project will improve electric reliability and resiliency for residential and commercial customers in this area.

We are proposing to build Langley Substation on approximately 1.9 acres about 400 feet west of our Peninsula Substation within the existing 350-foot wide right of way. The new substation aesthetics will look similar to Peninsula Substation. The rebuilt transmission line structures will be weathering steel monopole and three-pole structures similar in appearance and height to the original wooden poles.

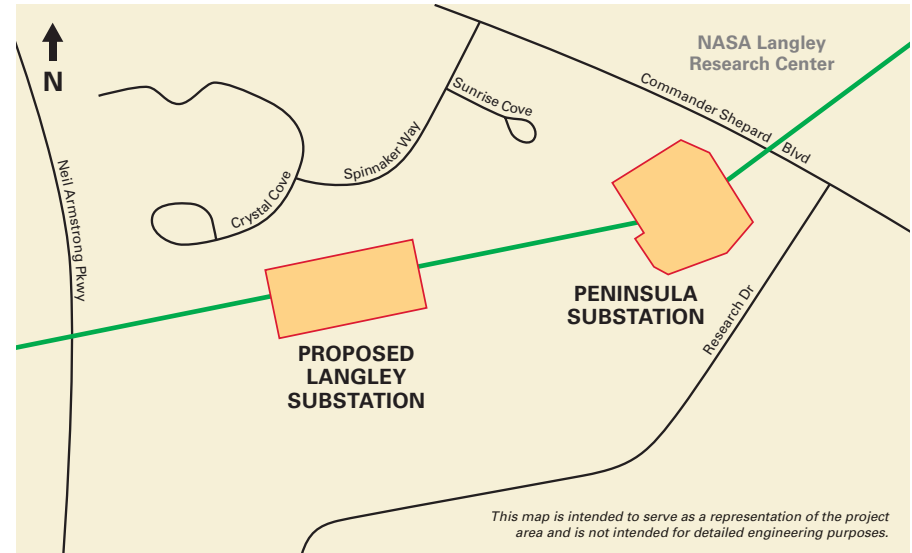

We are scheduled to survey the area in the coming weeks. You can expect to see personnel on foot or in vehicles entering the right of way, which may include use of access roads outside the right of way.

After all necessary permits and approvals are received, we plan to begin transmission line construction in late 2023. Substation construction is expected to begin in fall 2024, with both transmission line and substation work concluding in late 2025.

Your electric service is not expected to be interrupted as a result of this project. We will continue to update you as activities progress. Thank you for your patience and understanding as we work to complete this important reliability project.
