Re: 3D Seismic Program, Dry Piney Unit, Sublette County, Wyoming

Dear David:

Wexpro Company requests pre-participation approval by the hydrocarbon monitor to participate in a 3D seismic program over the Dry Piney Unit located in Sublette County, Wyoming, as more particularly described below. This request is made pursuant to the October 17, 1994 Guideline Letter which requires Wexpro to obtain pre-participation review and approval by the hydrocarbon monitor for participation in 3D seismic programs.

Wexpro proposes to participate in shooting a shoot a 3D seismic program over the area encompassing the Dry Piney Unit, consisting of approximately 52 square miles. Wexpro expects this seismic program to help identify and locate controlling well performance mechanisms related to this field. Such mechanisms may be due to any of a number of seismically identifiable features, such as faulting, lineament trends, fracture trends, etc. In the Dry Piney area it appears that faulting may be an important factor in reservoir compartmentalization. The 3D seismic information should help Wexpro identify where to optimally place future wells as well as where not to drill. Wexpro's percentage of participation in the 3D seismic program is proportional to its ownership in the area. That is, the data required to map the Dry Piney area is approximately 15 square miles of a total of 52 square miles. Wexpro's cost responsibility is 14.42% of the total cost of \$1,638,000, or a total of \$236,200.

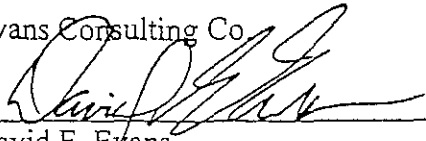

Based on the October 17, 1994 Guideline Letter on 3D seismic participation, we request pre-authorization approval to participate in this 3D seismic survey for the Dry Pinney Unit. Also, pursuant to the Guideline Letter, the costs of the survey will be expensed rather than capitalized. Please indicate your approval of Wexpro's participation in this seismic program. Should you have any questions, please do not hesitate to call me.
