Lake Murray, FERC Project 516

Land Use and Shoreline Management Plan

LAKE MURRAY FIVE YEAR REVIEW

November 11, 1999

Boatlift Restrictions

Only one boatlift will be permitted per individual dock. Boatlifts have become a very popular way for Lake Residents to protect their boats in heavy traffic and high energy areas. When the Lake Management Department receives a boatlift request, many times the applicant request two lifts, one on each side of the dock. The Lake Management Department is trying to reduce the overall size of permanent structures located at the end of docks and will only permit one low profile boatlift per individual dock. The Shoreline Management booklet will be updated to incorporate the one boatlift policy.

Slip Dock Requirement

The current Shoreline Management Plan will allow a slip-type dock only when the applicant has a minimum of 200 feet of shoreline. This policy has been in effect since 1994. The SCE&G Shoreline Management Booklet will be updated to incorporate the slip dock requirement.
