

# Southern System Expansion

## ST. GEORGE PROJECT OVERVIEW

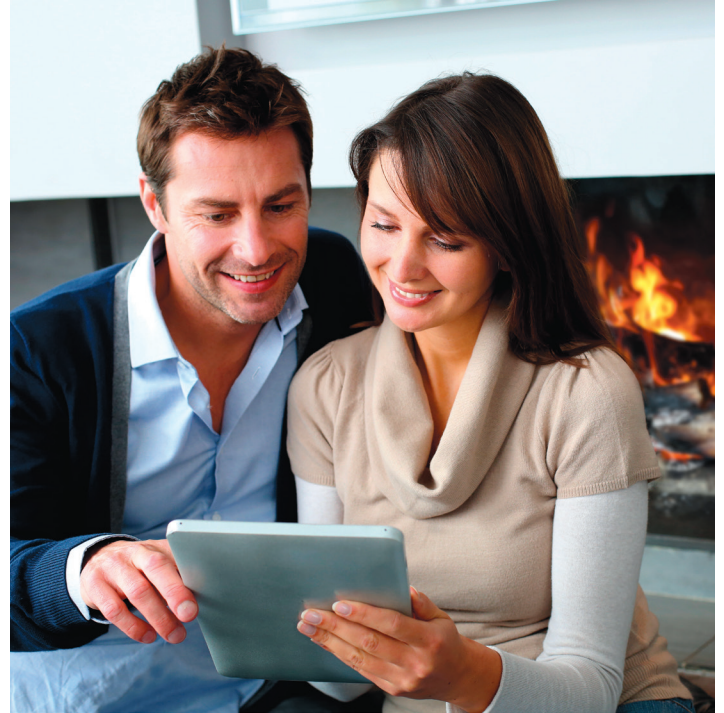

### ABOUT THE PROJECT

Dominion Energy is proposing the Southern System Expansion Project to help support the continuing growth of the St. George, Utah, area to residential, commercial and industrial customers.

America is now the world's largest producer of natural gas. Greater access to an additional supply of American natural gas would decrease our dependence on foreign energy sources to power our region. When compared with sources from abroad, American energy sources cost far less to bring to market, resulting in decreased energy costs.

The project would include installing a 7-mile section of natural gas pipeline in the city of St. George. The 12-inch pipeline route will run along Red Hills Parkway and 450 North. This pipeline will add capacity to Dominion Energy's existing natural gas pipeline system to serve growing needs in the community.

Dominion Energy is committed to completing this project safely and on schedule while minimizing as much as possible any inconvenience to local businesses and residents. To accomplish this, some work may be performed at night and on weekends. This will reduce impacts on morning and evening commutes.

### PROPOSED PROJECT SCHEDULE

MILESTONE	TARGET
Stakeholder Outreach	Fourth Quarter 2019
Begin Construction	First Quarter 2020
Project In-Service	Fourth Quarter 2020

### ABOUT DOMINION ENERGY UTAH

Dominion Energy Utah is a subsidiary of Virginia-based Dominion Energy (NYSE: D) and provides natural gas service to 1 million homes and businesses in Utah. The company's reputation is built on delivering safe, reliable natural gas to heat homes and water, cook food, clean clothes and help fuel the economy.
