

Dominion Energy presents: A Day In The Life of a REC

Hi I'm a Renewable Energy Certificate, and I'm here to walk you through my day.

Both of these facilities are generating the same amount of energy, but in different ways. How can you tell the difference?

That's what I'm here for!

See, all energy goes swimming in the same power pool. Our electricity mixes together.

With me, you can tell the difference between renewable and nonrenewable energy sources.

This matters because:

When more RECs are purchased, more renewable energy projects can be built. This helps reduce greenhouse gas emissions and lowers levels of some types of air pollution.

When people buy RECs like me, they are helping fund a sustainable, cleaner future.

And once someone claims me, the environmental benefit is theirs to own. I've done my job and now I can retire.

Did you know Dominion Energy customers can match their electricity use with RECs like me through a variety of simple and affordable renewable energy programs including REC Select, 100% Renewable Energy, Green Power, and Community Solar?

Join your fellow Virginians who are partnering with us to address climate change through our renewable energy programs.
