

[Music]

5 ways we prepare for hurricane season.

Completing projects to increase reliability and reduce outages.

Our crews are working year-round on initiatives that shorten restoration times and reduce the number of outages following major storms.

Adapting our safety protocols.

We are committed to practicing social distancing and proper hygiene to keep everyone safe. Our response will be adapted to mitigate the impact of COVID-19.

Training and drills are being completed virtually.

We continue to conduct training and are regularly testing our systems. We are working with industry peers to align our plans during this unprecedented time.

New technology allows our crews to work safely.

Drones allow us to quickly assess damage created by severe weather. The sooner we understand the damage that has occurred, the faster we can assign crews to the heaviest impacted areas. Drones can also reduce the number of personnel needed to assess damage.

We remain committed to restoring service after severe weather hits

We always work quickly to ensure public safety and restore power to essential services such as hospitals, fire and police departments, public water systems, and 911 call centers. We are in this together. And we are ready to respond when you need us most.
