

Speaker 1 ([00:01](#)):

Introducing a new time of use plan from Dominion Energy. The Off-Peak Plan is available to residential Virginia customers in locations where smart meters have already been installed. Smart meters are the latest in metering technology, and one way that Dominion Energy is investing in our infrastructure, and providing new ways our customers can save. Under this voluntary plan, you'll be charged different amounts for the electricity you use, depending on when you use it throughout the day. Each day you'll know the hours when electricity is most expensive, and most affordable.

Speaker 1 ([00:37](#)):

Understanding this gives you the ability to shift your usage to cheaper or off peak hours. You are in control. Participants will have access to a new bill comparison tool, and receive monthly tips on how small shifts in your daily behavior can result in savings. Adjusting your thermostat, running appliances, or charging your electric vehicle during off-peak hours can result in energy conservation, lowering your carbon footprint, and saving you money. We have you in mind, as we transform the grid with new tools that offer more choices, and ways to save, and deliver clean energy.
