

June 29, 2021

Dear Neighbor,

I am writing to update you on Dominion Energy's Chesterfield Power Station coal ash management efforts as we prepare to remove 15 million cubic yards from the lower and upper coal ash storage areas.

Dominion Energy is sensitive to traffic impacts on Coxendale Road related to removing the coal ash. In addition to serving residents' and schools' needs, this road provides access to the Henricus Historical Park, Dutch Gap Conservation Area, and Dutch Gap Boat Launch. These historical and recreational sites attract approximately 500,000 visitors and 240,000 vehicles each year.

After the July 4th holiday, Dominion Energy and contractor construction teams will start road improvements along Coxendale and Henricus Park roads. Residents and visitors may see some new traffic patterns and road flaggers. These enhancements will allow the company to remove coal ash safely, efficiently, and cost-effectively over the next decade. All Dutch Gap county facilities will continue to remain open during our 2021 construction efforts and beyond until new county access points/facilities are open.

Dominion Energy and contractor teams are also working on completing an on-site railroad handling system to transport up to 7 million cubic yards of coal ash offsite to be recycled under state law. We are scheduled to begin transporting coal ash to be beneficially recycled or placed in a state-of-the-art landfill north of Coxendale Road on the power station property late in the fourth quarter of 2021.

Dominion Energy remains committed to keeping you informed of our coal ash management efforts. For additional information, please go to [www.dominionenergy.com/chesterfieldccr](http://www.dominionenergy.com/chesterfieldccr) to learn more about our coal ash closure and transportation plans.

If you have any questions, please contact my Dominion Energy colleague Alex Rendon at 833-742-0462 or [chesterfieldccr@dominionenergy.com](mailto:chesterfieldccr@dominionenergy.com).
