

## CCR Rule Semi-Annual Remedy Selection Progress Report

### Chesterfield Power Station – Lower and Upper Ash Ponds Chester, Virginia May 11, 2020

Title 40 Code of Federal Regulations (CFR) Section 257.97(a) of the Coal Combustion Residuals (CCR) Rule requires the owner or operator of an existing CCR unit that has completed a corrective measures assessment for groundwater to prepare a semi-annual report describing the progress in selecting and designing the remedy. This report constitutes the second semi-annual remedy selection progress report for the Chesterfield Power Station Lower Ash Pond and Upper Ash Pond located in Chester, Virginia.

Assessments of corrective measures were initiated for the Lower Ash Pond on December 18, 2018 and for the Upper Ash Pond on January 30, 2019, in response to groundwater protection standard exceedances for several constituents in downgradient groundwater monitoring wells. Pursuant to 40 CFR §257.96(a), a demonstration of need for a 60-day extension for the assessment of corrective measures was completed for the Lower Ash Pond on March 15, 2019, and the combined Assessment of Corrective Measures (ACM) Report for the Lower and Upper Ash Ponds was completed and placed in the unit's operating record on May 17, 2019. Based on the results of the corrective measures assessment, Dominion Energy must, as soon as feasible, select a remedy that meets the standards listed in 40 CFR §257.97(b). A summary of the progress selecting a remedy is provided in the selections below.

#### Summary of Actions Completed to Date

The following interim measures and actions have been completed to date:

- Deployment of a geosynthetic rain cover and Wind Defender cover over the entire footprint of the Lower Ash Pond to eliminate fugitive dust, significantly reduce precipitation from infiltrating through the unit, and to prevent the generation of contact stormwater;
- In support of the closure by removal requirement set forth in Virginia Senate Bill 1355, Dominion Energy has retained engineering firm AECOM as the Engineer of Record to develop and execute plans for the removal of CCR material from both the Lower and Upper Ash Ponds; and
- Owners engineer is performing a geotechnical evaluation of the Lower and Upper Ash Ponds to determine extent and characteristics of CCR material to aid in removal sequencing.

#### Planned Activities

The following activities are planned:

- In coordination with owner's engineer, develop a detailed scope of work for the removal of the CCR materials including a water management plan during the ash removal;
- Develop plans for the build-out of the Chesterfield Power Station Fossil Fuel Combustion Products Facility to accept materials from the Lower and Upper Ash Ponds;
- Develop a draft closure by removal solid waste permit for submittal to Virginia DEQ for approval;
- Continue evaluation of groundwater characteristics to enhance conceptual site models; and
- Complete the next semi-annual progress report no later than November 7, 2020.
