## EXECUTIVE SUMMARY

This 2020 CCR Annual Groundwater Monitoring and Corrective Action Report (Report) was prepared on behalf of Virginia Electric and Power Company d/b/a Dominion Energy Virginia (Dominion Energy) for the Mt. Storm Power Station (Station) Phase B Landfill (Unit) located in Mt. Storm, West Virginia. The Unit is an active industrial landfill that accepts CCR and is therefore considered an existing landfill under Title 40 Code of Federal Regulations (CFR) Part 257.50 *et seq.* [Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (Final Rule; Federal Register Vol. 80, No. 74, 21302-21501 on April 17, 2015, as amended)]. Pursuant to the CCR Rule, the Station operator is required to complete an Annual Groundwater Monitoring and Corrective Action Report (Report) by January 31 annually.

The Report documents the status of the CCR groundwater monitoring program for the Unit, summarizes key actions completed, describes issues encountered, actions taken to resolve identified concerns, and projected key activities for calendar year 2020. More specifically, this Report describes the results of the CCR Rule Assessment Monitoring Program (AMP) activities performed in 2020 to comply with CCR Rule requirements, and the progression of future sampling activities pursuant to the CCR Rule and the Unit's *Groundwater Monitoring Plan* (GMP).

In accordance with 40 CFR Part 257.90(e)(6), the following information is being provided as an overview of the current status of groundwater monitoring and corrective action for the Unit:

- i. *At the start of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in §257.94 or the assessment monitoring program in §257.95.*
  - At the start of 2020, the Unit was operating under the assessment monitoring program in §257.95.
- ii. *At the end of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in §257.94 or the assessment monitoring program in §257.95.*
  - At the end of 2020, the Unit was operating under the assessment monitoring program in §257.95.
- iii. *If it was determined that there was a statistically significant increase over background for one or more constituents listed in appendix III to this part pursuant to §257.94(e).*
  - (A) *Identify those constituents listed in appendix III to this part and the names of the monitoring wells associated with such an increase*
    - In 2020, there were statistically significant increases identified over background for the following appendix III constituents at the following wells during the second semi-annual 2019 event and the first semi-annual 2020 event:
      - Fluoride – well MW-7
      - pH – wells MW-10, MW-12R, MW-13, MW-14
      - Sulfate – MW-7, MW-14, MWFGDW2 (upgradient well)
  - (B) *Provide the date when the assessment program was initiated for the CCR unit.*

- The Unit initiated the assessment monitoring program on April 20, 2018.
- iv. *If it was determined that there was a statistically significant level above the groundwater protection standard for one or more constituents listed in appendix IV to this part pursuant to §257.95(g)*
- (A) *Identify those constituents listed in appendix IV to this part and the names of the monitoring wells associated with such an increase*
  - In 2020, there were no statistically significant increases over the groundwater protection standard.
- (B) *Provide the date when the assessment of corrective measures was initiated for the CCR unit*
  - Not applicable
- (C) *Provide the date when the public meeting was held for the assessment of corrective measures for the CCR unit*
  - Not applicable
- (D) *Provide the date when the assessment of corrective measures was completed for the CCR unit*
  - Not applicable
- v. *Whether a remedy was selected pursuant to §257.97 during the current annual reporting period, and if so, the date of the remedy selection*
  - Not applicable
- vi. *Whether remedial activities were initiated or are ongoing pursuant to §257.98 during the current annual reporting period*
  - Not applicable

Based on the 2020 sampling and data analysis results, Golder recommends that Dominion Energy continue to maintain an Assessment Monitoring Program at this Unit.

## 1.0 INTRODUCTION

This 2020 CCR Annual Groundwater Monitoring and Corrective Action Report (Report) was prepared on behalf of Virginia Electric and Power Company d/b/a Dominion Energy Virginia (Dominion Energy) for the Mt. Storm Power Station (Station) Phase B Industrial Landfill (Unit), located in Mt. Storm, West Virginia. The existing Unit is subject to the groundwater monitoring requirements in Title 40 Code of Federal Regulations (CFR) Part 257.50 *et seq.* [Disposal of Coal Combustion Residuals from Electric Utilities (CCR Rule; Federal Register Vol. 80, No. 74, 21302-21501 on April 17, 2015, as amended) (EPA, 2015, 2016, 2018, 2020a, 2020b)]. Pursuant to the CCR Rule, no later than January 31 annually, the owner or operator of a CCR Unit must prepare an annual groundwater monitoring and corrective action report for the CCR Unit documenting the status of groundwater monitoring and corrective action programs for the preceding year.

Golder Associates Inc. (Golder) has prepared this Report for the Unit on behalf of Dominion Energy in accordance with CCR Rule Part 257.90(e). This Report presents relevant data evaluations from the second semi-annual 2019 event that were completed in 2020, provides the monitoring data and required data evaluations for the first semi-annual CCR monitoring compliance event performed in April 2020, and provides the monitoring data for the second semi-annual CCR monitoring compliance event performed in October 2020.

### 1.1 Site Location

The Station is located at 436 Dominion Boulevard in Mt. Storm, West Virginia approximately 40 miles south-southwest of Cumberland, Maryland. The Unit is located approximately 2,500 feet to the southwest of the Station on the east side of West Virginia Highway 93 (Power Station Highway). A Site Location Map is presented as Drawing 1.

### 1.2 Site History

The Station and adjoining 1,200-acre Mt. Storm Lake were constructed in 1965. Currently, the CCR generated by the 1,600-megawatt Station is disposed of in the Unit and the adjacent Phase A Landfill, which is addressed in a separate report. The Phase B Landfill was permitted in 1986 as a 155-acre unit for disposal of flue-gas desulfurization (FGD) solids. Groundwater monitoring at the Unit, required under the CCR Rule, was initiated in 2016.

### 1.3 Key Actions

Key actions for this Facility to date are as follows:

- Permitted for management of CCR by the West Virginia Department of Environmental Protection (DEP) under Solid Waste/National Discharge Elimination System (NPDES) permit No. WV0110256;

- Initiated the Detection Monitoring Program (DMP) on March 15, 2016, with the collection of eight baseline/background samples and completed the background monitoring activities on August 23, 2017, pursuant to the CCR Rule [257.94(b)];
- Conducted the initial DMP compliance sampling event between October 4 and October 12, 2017 and completed the sample analyses on October 23, 2017, pursuant to the CCR Rule [257.94];
- Placed a copy of the Unit's Groundwater Monitoring Plan (GMP) documenting the design information for the monitoring wells pursuant to the CCR Rule [257.91(e)(1)] in the Station's operating record on October 17, 2017, pursuant to the CCR Rule [257.105(h)(2)];
- Certified the groundwater monitoring system pursuant to the CCR Rule [257.91(e)(1) and posted the Certification in the Station's operating record on October 17, 2017, pursuant to the CCR Rule [257.105(h)(3)]; and
- Certified the selection of a statistical method pursuant to the CCR Rule [257.93(f)(6)] and posted the Certification in the Station's operating record on October 17, 2017, pursuant to the CCR Rule [257.105(h)(4)].
- Placed a notification of a Statistically Significant Increase (SSI) over the Unit's background concentrations under the DMP in the Station's operating record on January 21, 2018;
- Conducted the initial Assessment Monitoring Program (AMP) compliance sampling event on March 19, 2018, and completed the sample analyses on April 20, 2018, pursuant to the CCR Rule [257.95(b)];
- Established groundwater protection standards (GWPS) for detected constituents in Appendix IV of Part 257 on October 17, 2018, pursuant to the CCR Rule [257.95(d)(2)];
- Conducted the first semi-annual 2020 AMP compliance sampling event on April 14, 2020, and completed the sample analyses on June 19, 2020, pursuant to the CCR Rule [257.95(d)(1)]; and
- Conducted the second semi-annual 2020 AMP compliance sampling event on October 13, 2020, and completed the sample analyses on December 24, 2020, pursuant to the CCR Rule [257.95(d)(1)].

## 1.4 Monitoring Program Concerns

There were no monitoring program concerns identified during the semi-annual AMP compliance events conducted in 2020.

## 2.0 SITE INFORMATION

The first power generation turbine at the Station went online in September 1965 and was followed by the second turbine in June 1966. The third turbine went online December 1973. The Station is a coal-fired power station with a generating capacity of approximately 1,600 megawatts. The Unit is located on the Station property to the southwest of the power generation facility on the southern side of West Virginia Route 48. The Unit encompasses an approximate permitted disposal area of 155 acres. The Unit is regulated under the provisions of NPDES permit No. WV0110256.

As part of the Station operations, Dominion Energy operates the Unit for CCR storage. The Unit was subject to the groundwater monitoring provisions of the CCR Rule by October 17, 2017.

### 2.1 Monitoring Well Network

The Unit's GMP (AECOM, 2017a) details the design of the CCR Rule groundwater monitoring network. As presented in the GMP, the monitoring network is comprised of two (2) upgradient/background wells (MW-22 and MWFGDW2) and six (6) downgradient monitoring wells (MW-6R, MW-7, MW-10, MW-12R, MW-13, and MW-14) designed to monitor the uppermost aquifer beneath the Unit. The groundwater monitoring well locations relative to the Unit are shown on Drawing 2.

#### 2.1.1 Monitoring Well Installation and Decommissioning Activities

No groundwater monitoring wells associated with the Unit's CCR well network were installed or decommissioned in calendar year 2020.

## 2.2 Geology and Hydrogeology

A summary of the geology and hydrogeology for the Unit and surrounding area is presented in the following sections.

### 2.2.1 Geology

As presented on the West Virginia geologic map, the Station is located within the high plateau region of the Appalachian High Plateau physiographic province (Cardwell, 1968). The high plateau area is underlain by Paleozoic sedimentary rocks (Ordovician to Mississippian age) and the rocks are folded into a sequence of north-easterly trending parallel anticlines and synclines. Locally the area is referred to as the Allegheny Mountains. The Station is located on the eastern limb of the Blackwater Anticline which parallels the Little Blackwater River.

The area is underlain by formations of the Pennsylvanian-age Conemaugh and Allegheny Groups, which include, in descending order:

- Conemaugh Group
  - Buffalo Sandstone
  - Brush Creek shale and sandstone
  - Upper and Lower Mahoning Sandstones
  - Uffington Shale
- Allegheny Group
  - Upper Freeport Coal
  - Bolivar Claystone
  - Upper Freeport Sandstone
  - Lower Freeport Coal

The near surface geology is comprised of unconsolidated colluvium sediments that locally overlie decomposed (saprolitic) sandstone and shale transitioning to fractured competent sandstone and shale interbedded with coal beds. At the Station, the upper Brush Creek and Mahoning coal beds of the Conemaugh Group are absent, while the Upper Freeport and Lower Freeport coal beds of the Allegheny Group are present. The Upper Freeport coal bed is reported to have been mined using a combination of open pit and longwall mining technology, while the Lower Freeport coal bed is reported to be unmined.

## 2.2.2 Hydrogeology

The uppermost aquifer beneath the Unit is present within the weathered sedimentary rocks and colluvial deposits, generally within 9 to 30 feet below ground surface (bgs). The uppermost aquifer is unconfined and extends vertically into the lowered fractured bedrock formations with the uppermost shale formation acting as an aquitard. The groundwater gradient and approximate groundwater flow directions in the uppermost aquifer beneath the Unit are towards the east.

## 2.2.3 Potentiometric Surface Evaluation

Historical static water level data for the Unit are summarized in Table 1. Consistent with the requirements of the CCR Rule, the rate and direction of groundwater flow within the uppermost aquifer beneath the Unit was determined after each sampling event. The Potentiometric Surface Maps presented as Drawings 2 and 3 were prepared using static water level data obtained during the first and second semi-annual AMP events on April 13 and October 12, 2020, respectively. The interpreted data indicates that the hydraulic gradient and estimated

groundwater flow direction remains consistent with previous interpretations. Based on network review and regulatory requirements, Golder believes that the groundwater monitoring wells continue to be operated and maintained so that they perform to the design specifications in the Groundwater Monitoring System Certification for the Unit (AECOM, 2017b) consistent with 40CFR Part 257.91(e)(2) of the CCR Rule.

Using the groundwater contours presented as an overlay on Drawings 2 and 3, the average hydraulic gradient for the uppermost aquifer in the study area was calculated for each monitoring event using the following equations.

The average hydraulic gradient along the ideal flow line beneath the Unit was calculated using the following equation:

$$i = h_L/L$$

Where:       $i$  = hydraulic gradient (unitless)  
 $h_L$  = head loss (elevation difference in feet)  
 $L$  = length (horizontal distance in feet)

The groundwater flow rate was calculated using the following formula:

$$V = ki/\theta$$

Where:       $V$  = Groundwater Velocity (cm/s)  
 $k$  = hydraulic conductivity (cm/s)  
 $i$  = hydraulic gradient (unitless)  
 $\theta$  = assumed porosity (unitless)

Using the estimated effective porosity value of 10% for the weathered and fractured bedrock comprising the uppermost aquifer, the estimated average hydraulic conductivity values for the different matrices of 1.41E-05 centimeters per second (geometric average of available slug test data), and the calculated gradient, the average rate of groundwater flow ( $V_{gw}$ ) for the weathered and fractured bedrock comprising the uppermost aquifer beneath the Unit was calculated and is summarized in the following table.

Groundwater Flow	Hydraulic Conductivity (k, cm/s)	Contour lines (feet amsl)	Flow Length (feet)	Average Gradient (i)	Assumed Porosity ( $\theta$ )	Estimated Groundwater Velocity	
						(cm/s)	(feet/year)
1 <sup>st</sup> Semi-Annual Assessment Monitoring Program Event (April 2020)							
$V_{gw}$	1.41E-05	3540-3280	3,663	7.10E-02	0.10	1.0E-05	10
2 <sup>nd</sup> Semi-Annual Assessment Monitoring Program Event (October 2020)							
$V_{gw}$	1.41E-05	3540-3280	3,650	7.12E-02	0.10	1.0E-05	10

As presented, the estimated average groundwater flow rate in the uppermost aquifer beneath the Unit is approximately 10 feet per year. The calculated flow rate for the events conducted in 2020 is consistent with previous calculations for the Unit.

### 3.0 FIELD ACTIVITIES

Pursuant to the requirements in 40 CFR 257.95(d)(1) two semi-annual AMP events were completed for the Unit for the constituents and parameters listed in Appendix III of the CCR Rule and constituents and parameters listed in Appendix IV of the CCR Rule. Summaries of the AMP sampling events are presented below.

Monitoring Event	Sample Dates	Final Laboratory Package Receipt Date
1 <sup>st</sup> Semi-Annual Assessment Monitoring Program Event	April 14, 2020	June 19, 2020
2 <sup>nd</sup> Semi-Annual Assessment Monitoring Program Event	October 13, 2020	December 24, 2020

During each of the AMP sampling events, the compliance monitoring wells were sampled in accordance with the procedures presented in the Station's GMP (AECOM, 2017a).

Samples collected during each of the sampling events were shipped via FedEx on ice in secured coolers under chain-of-custody control to Eurofins TestAmerica Laboratories Inc. (TestAmerica) in North Canton, Ohio (#210). Total dissolved solids and radium samples were then shipped to the Pittsburgh, Pennsylvania (#142) and St. Louis, Missouri (#381) locations of TestAmerica for analysis. The three TestAmerica locations are West Virginia Department of Environmental Protection accredited laboratories for CCR Rule Appendix III and IV constituents analyzed.

## 4.0 LABORATORY ANALYTICAL RESULTS

Laboratory analytical results from the AMP sampling events conducted in 2020 are summarized in the following sections.

### 4.1 1<sup>st</sup> Semi-Annual Assessment Monitoring Program Event

The groundwater samples collected during the first semi-annual 2020 AMP event were analyzed by TestAmerica for the presence of concentrations of the constituents and parameters listed in Appendix III and Appendix IV of the CCR Rule. The laboratory certificates of analysis, chain-of-custody forms, and field logs for the sampling event are presented in Appendix A. A summary of the CCR sampling data for the Unit is presented in Table 3.

### 4.2 2<sup>nd</sup> Semi-Annual Assessment Monitoring Program Event

The groundwater samples collected during the second semi-annual 2020 AMP event were analyzed by TestAmerica for the presence of concentrations of the constituents and parameters listed in Appendix III of the CCR rule and previously detected constituents and parameters of the following Appendix IV of the CCR Rule detects. The current list of Appendix IV detects is as follows:

- |             |              |                |
|-------------|--------------|----------------|
| ■ Arsenic   | ■ Cobalt     | ■ Selenium     |
| ■ Barium    | ■ Fluoride   | ■ Thallium     |
| ■ Beryllium | ■ Lead       | ■ Total Radium |
| ■ Cadmium   | ■ Lithium    |                |
| ■ Chromium  | ■ Molybdenum |                |

Pursuant to CCR Rule §257.95(b), all Appendix IV constituents were sampled during the first semi-annual event. However due to laboratory oversight, mercury analysis for all samples for the first semi-annual AMP event were analyzed past the method holding time. Due to this, and despite mercury not being a previously detected constituent for Appendix IV, mercury was sampled for during the second semi-annual AMP event to confirm the out of hold results. The non-detects were confirmed and mercury has not been added to the current list of Appendix IV detects.

The laboratory certificates of analysis, chain-of-custody forms, and field logs for the sampling event are presented in Appendix B. A summary of the CCR sampling data for the Unit is presented in Table 4.

## 5.0 DATA QUALITY VALIDATION

The Quality Assurance (QA) and quality control (QC) data provided by the laboratory for the AMP sampling events were reviewed to ensure that the analytical results met the project's data quality objectives as outlined in the Station's GMP (AECOM, 2017a). The review process was performed in general accordance with procedures outlined in the following EPA and Department of Energy (DOE) guidance documents:

- National Functional Guidelines for Inorganic Superfund Methods Data Review, January 2017 (EPA, 2017); and
- *Evaluation of Radiochemical Data Usability*. 1997. Department of Energy (Paar, J.G. et al, April 1997); and
- Sampling and Analysis Plan for US Department of Energy Office of Legacy Management Sites (DOE, 2017).

### 5.1 1<sup>st</sup> Semi-Annual Compliance Event Findings

The laboratory and field QA/QC data for the first semi-annual 2020 compliance monitoring event samples collected on April 14, 2020, were reviewed in accordance with United States Environmental Protection Agency (EPA)/DOE Protocol. Field QA/QC samples for this event included a field blank and a duplicate sample that was collected from compliance well MW-22 that were collected at the Unit on April 14, 2020. These QA/QC samples were analyzed for the same constituents as the groundwater samples. Based on review of the laboratory-provided QC data and EPA/DOE guidance recommendations, the data for this sampling event were determined to meet the data quality objectives for the project. It is noted that due to laboratory oversight, mercury analysis for all samples were analyzed 9 days past the method holding time. All of the mercury results have been qualified as non-detect estimated (UJ). A copy of the data validation record is included in Appendix A.

### 5.2 2<sup>nd</sup> Semi-Annual Compliance Event Findings

The laboratory and field QA/QC data for the second semi-annual 2020 compliance monitoring event samples collected October 13, 2020, were reviewed in accordance with EPA/DOE Protocol. Field QA/QC samples for this event included a field blank and a duplicate sample that was collected from compliance well MW-22 that were collected at the Unit on October 13, 2020. These QA/QC samples were analyzed for the same constituents as the groundwater samples. Based on review of the laboratory-provided QC data and EPA/DOE guidance recommendations, the data for this sampling event were determined to meet the data quality objectives for the project. A copy of the data validation record is included in Appendix B.

## 6.0 STATISTICAL EVALUATION OF GROUNDWATER DATA

Per 40 CFR Part 257.94(e)(1), the Unit advanced into the AMP in March 2018. Consistent with the CCR Rule requirements the 2020 monitoring results were compared to Facility background concentrations and GWPS established on October 17, 2018, and updated on September 17, 2020.

### 6.1 2<sup>nd</sup> Semi-Annual 2019 Assessment Monitoring Data Evaluations

Pursuant to 40 CFR Subpart 257.95(e,f,g), the results from the Unit's monitoring wells were compared to established background concentrations and SSIs were identified over the Unit's background for the second semi-annual AMP sampling event. Concentrations above background are identified in Table 2.

There were no GWPS exceedances identified for the second semi-annual 2019 AMP sampling event.

### 6.2 1<sup>st</sup> Semi-Annual 2020 Assessment Monitoring Data Evaluations

Pursuant to 40 CFR Subpart 257.95(e,f,g), the results from the Unit's monitoring wells were compared to updated background concentrations and SSIs were identified over the Unit's background for the first semi-annual AMP sampling event. Concentrations above background are identified in Table 3.

There were no GWPS exceedances identified for the first semi-annual 2020 AMP sampling event.

### 6.3 2<sup>nd</sup> Semi-Annual 2020 Assessment Monitoring Data Evaluations

The data for the second semi-annual AMP sampling event are being evaluated against the established GWPS for the Unit and the Facility background concentrations in accordance with the CCR Rule timeframes. The results from those evaluations will be presented in the *2021 Annual Groundwater Monitoring and Corrective Action Report*.

## 7.0 CONCLUSIONS

### 7.1 Findings

The first semi-annual 2020 AMP compliance sampling event was completed on April 14, 2020, with sample analyses completed on June 19, 2020. The second semi-annual 2020 AMP compliance sampling event was completed on October 13, 2020, with sample analyses complete on December 24, 2020. These groundwater sampling and analysis activities were conducted in general accordance with the requirements of the Unit's GMP for the CCR network.

Comparisons of the laboratory analytical results from the 2019 second semi-annual and 2020 first semi-annual sampling events established GWPS identified no GWPS exceedances. Monitoring results from the second semi-annual 2020 AMP event conducted in October 2020 are being evaluated against site-specific GWPS in accordance with the applicable CCR Rule timeframe.

### 7.2 Planned Activities

Based on the results presented herein, Dominion Energy intends to complete the required data evaluations for the second semi-annual 2020 AMP sampling event within the CCR Rule prescribed timeframe and continue semi-annual groundwater monitoring activities in 2021 that are consistent with the provisions in the CCR Rule (part 257.95 *et. seq*) and the Unit's GMP.

*Approach to Closure Part B: Alternate Demonstration for Unlined Surface Impoundments.* [EPA-HQ-OLEM-2019-0173; FRL-10015-88-OLEM]. RIN-2050-AH11. November.

Paar, J.G., and D.R. Porterfield. 1997. *Evaluation of radiochemical data usability.* DOE (Department of Energy) 10.2172/46126. April.

## 9.0 SIGNATURE SECTION

This 2020 Annual CCR Groundwater Monitoring and Corrective Action Report (Report) has been prepared by a qualified groundwater scientist on behalf of Virginia Electric and Power Company d/b/a Dominion Energy Virginia (Dominion Energy) for the Mt. Storm Power Station Phase B Industrial Landfill. This Report satisfies the reporting requirements specified in Title 40 Code of Federal Regulations (CFR) Part 257.90(e) et seq. [Disposal of Coal Combustion Residuals (CCR) from Electric Utilities (CCR Rule; Federal Register Vol. 80, No. 74, 21302-21501 on April 17, 2015, as amended)].

## Qualifiers

### Metals

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.
U	Result is less than the sample detection limit.
U	Result is less than the sample detection limit.

## Glossary

### Abbreviation

These commonly used abbreviations may or may not be present in this report.	
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

**Laboratory: Eurofins TestAmerica, Canton**

Narrative

## CASE NARRATIVE

**Client: Golder Associates Inc.**

**Project: Mt. Storm Phase B CCR**

**Report Number: 240-129038-1  
Revised**

Revised 6/12/2020. The report was revised to include metals by method 6020B and 6010D.

Revised 6/19/2020. The report was revised to include antimony.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

### RECEIPT

The samples were received on 4/16/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.6° C and 2.2° C.

### ANIONS

Samples MW-6R (240-129038-3), MW-7 (240-129038-4), MW-12R (240-129038-6), MW-13 (240-129038-7) and MW-14 (240-129038-8) were analyzed for anions in accordance with EPA SW-846 Method 9056A. The samples were analyzed on 05/02/2020 and 05/04/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Narrative

## CASE NARRATIVE

**Client: Golder Associates Inc.**

**Project: Mt. Storm Phase B CCR**

**Report Number: 240-129038-3**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The Radium analyses were performed at the Eurofins TestAmerica, St. Louis laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

#### RECEIPT

The samples were received on 4/16/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.6° C and 2.2° C.

#### RADIUM-226

Samples MW-6R (240-129038-3), MW-7 (240-129038-4), MW-12R (240-129038-6), MW-13 (240-129038-7) and MW-14 (240-129038-8) were analyzed for Radium-226 in accordance with SW846 Method 9315. The samples were prepared on 04/20/2020 and analyzed on 05/13/2020.

Ra-226 Prep Batch 160-468173: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. MW-6R (240-129038-3), MW-7 (240-129038-4), MW-12R (240-129038-6), MW-13 (240-129038-7), MW-14 (240-129038-8), (LCS 160-468173/1-A), (LCSD 160-468173/2-A), (MB 160-468173/23-B), (240-129038-M-2-A), (240-129038-B-2-C MS) and (240-129038-B-2-D MSD)

Radium-226 Prep Batch 160-468173: Insufficient sample volume was available to perform a sample duplicate (DUP) associated with preparation batch 160-468173.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The Total Dissolved Solids analysis was performed by the Eurofins TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

#### RECEIPT

The samples were received on 4/16/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.6° C, 1.7° C, 2.0° C, 2.9° C and 4.7° C.

#### TOTAL DISSOLVED SOLIDS

Samples MW-22 (240-129060-1), MWFGDW2 (240-129060-2), MW-10 (240-129060-6), FIELD BLANK (240-129060-15) and DUPLICATE (240-129060-16) were analyzed for total dissolved solids in accordance with SM 2540C. The samples were analyzed on 04/21/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Narrative

---

## CASE NARRATIVE

**Client: Golder Associates Inc.**

**Project: Mount Storm Phase B CCR**

**Report Number: 240-129060-3**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Eurofins TestAmerica, Canton attests to the validity of the laboratory data generated by Eurofins TestAmerica facilities reported herein. All analyses performed by Eurofins TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. Eurofins TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

## Job ID: 240-129060-3 (Continued)

### Laboratory: Eurofins TestAmerica, Canton (Continued)

The Total Dissolved Solids analysis was performed by the Eurofins TestAmerica Pittsburgh laboratory.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of Eurofins TestAmerica and its client.

### RECEIPT

The samples were received on 4/16/2020 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.6° C, 1.7° C, 2.0° C, 2.9° C and 4.7° C.

### TOTAL DISSOLVED SOLIDS

Samples MW-7 (240-129060-4), MW-12R (240-129060-7), MW-13 (240-129060-8), MW-14 (240-129060-9) and MW-6R (240-129060-13) were analyzed for total dissolved solids in accordance with SM 2540C. The samples were analyzed on 04/21/2020.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# Accreditation/Certification Summary

Client: Golder Associates Inc.

Job ID: 240-129038-1

Project/Site: Mt. Storm Phase B CCR

## Laboratory: Eurofins TestAmerica, Canton

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
West Virginia DEP	State	210	12-31-20

## Laboratory: Eurofins TestAmerica, Pittsburgh

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
West Virginia DEP	State	142	02-01-21

## Laboratory: Eurofins TestAmerica, St. Louis

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
West Virginia DEP	State	381	10-31-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Ra226_Ra228		Water	Combined Radium 226 + 228

phone 330.497.9396 fax 330.497.0772

North Canton, OH 44720-6900  
phone 330.497.9396 fax 330.497.0772

Preservation Used: 1 = ce. 2 = HCl; 3 = H<sub>2</sub>SO<sub>4</sub>; 4 = HNO<sub>3</sub>; 5 = NaOH; 6 = Other

## Possible Hazard Identification:

Are any samples from a listed EPA Hazardous Waste?      Please List any EPA Waste Codes for the sample in the Comments Section if the lab is in disuse of the sample

Project Name: Mount Storm Power Station - Phase B - CCR Appendix III & IV

Project Reference Number: 20139936

Sampling Event Date: April 14, 2020

Review Date: 01/05/2020

Initials: CJL

Review Date: 1/13/2021

Initials: RMS

**Person(s) performing the review are to initial each item on this form as acknowledgement of data acceptance, or as acknowledgement of a review issue. In the case of the latter, a brief explanation should follow the applicable item.**

Golder Associates Inc. has reviewed the laboratory certificates of analysis, chain-of-custody form, and laboratory provided sample group quality assurance and quality control data for the above referenced sample group to identify potential bias or inaccuracy, in general accordance with the following United States Environmental Protection Agency (EPA) and Department of Energy (DOE) documents:

- National Functional Guidelines for Inorganic Superfund Methods Data Review, January 2017;
- US Department of Energy Evaluation of Radiochemical Data Usability, April 1997; and
- Sampling and Analysis Plan for US Department of Energy Office of Legacy Management Sites.

#### COMMON ACRONYMS:

- |   |                                     |
|---|-------------------------------------|
| • MS = matrix spike                       | • J = estimated                     |
| • MSD = matrix spike duplicate            | • ND and/or U= not detected         |
| • LCS = laboratory control spike          | • COC = chain of custody            |
| • RPD = relative percent difference       | • QC = quality control              |
| • MB = method blank                       | • µg/L = micrograms per liter       |
| • DUP = duplicate                         | • mg/L = milligrams per liter       |
| • FB = field blank                        | • EPA = United States Environmental |
| • VSWMR = Virginia Solid Waste Management | Protection Agency                   |
| Regulations                               | • pCi/L = picocuries per liter      |

#### COMPLIANCE ANALYTE LIST

- Historical VPDES Parameters  
 CCR Appendix III to Part 257  
 CCR Appendix IV to Part 257  
 VSWMR Phase II Parameters: \_\_\_\_\_  
 Other: \_\_\_\_\_

Note: TestAmerica Job No.: 240-129038-1

## 1.0 CHAIN OF CUSTODY (COC) REVIEW

- Yes COC was properly signed by all parties.  
Yes Correct project name and number are on the form.  
Yes Sample receipt condition at laboratory was acceptable.  
Yes Each sample and blank submitted for analysis appears in the data report.

Note: \_\_\_\_\_

## 2.0 SAMPLE HOLDING TIMES

- Yes Holding times for extraction and/or analysis were met for each analytical method.

Review Criteria		
Method	Analytes	Holding Time
EPA 9056	Chloride, Fluoride, Sulfate	28 days
EPA 9315 EPA 9320	Radium 226 Radium 228	6 months
EPA 6000 series	Metals	6 months
EPA 7470A	Mercury	28 days
SM2540	Total Dissolved Solids	7 days

Notes: Due to laboratory oversight, the mercury analysis was not performed within the hold time for samples MW-22, MWFGDW2, MW-10, FIELD BLANK, and DUPLICATE.

## 3.0 LABORATORY QUALITY CONTROL REVIEW

- Yes Laboratory analyzed at least one internal blank for each method, where applicable.

- See Note Laboratory blanks were interference free.

Notes: The following table presents method blank detections and their associated sample delivery groups (SDG; batch). In accordance with EPA guidance, associated samples within the same batch have been evaluated using professional judgement. Inorganic data less than 10X the blank concentration may be qualified if the detection is not considered part of a visual data trend and is not consistent with recent historical data (i.e. the highest concentration reported over the last 8 sampling events). Organic data corresponding to blank contamination may be qualified if the detection is not considered part of a visual data trend and is not consistent with recent historical data. Additionally, associated samples for organic common lab contaminants (acetone, MC, and MEK) may be qualified if the results are 2X greater than the detected blank concentration. Associated samples may be qualified estimated high (J+), estimated low (J-), non-detect estimated (UJ) or unusable (R). As presented below, data qualification is recommended.

For radiochemistry data, if the reported absolute value of the method blank is above the minimum detectable concentration (MDC) and no other deficiencies are noted in the associated dataset, detections above the MDC and less than 5 times the concentration reported in the method blank may be blank qualified "J" in accordance with qualification guidance. As presented below, data qualification was not required.

Parameter	Method Blank Detection ( $\mu\text{g/L}$ )	Batch	Associated Qualified Sample(s)	Validator Qualifier
--	--	--	--	--

NA Surrogate recoveries are provided for each analytical method, where applicable.

NA Surrogate recoveries for each method are within the acceptable limits.

Notes: \_\_\_\_\_

Yes Tracer and carrier yields are provided for each analytical method, where applicable (Radiochemical Data Only).

Yes Tracer and carrier yields for each method are within the acceptable limits (Radiochemical Data Only).

Notes: \_\_\_\_\_

Yes MS/MSD/LCS/RPD data results are provided for each analytical method.

Yes MS/MSD/LCS/RPD recoveries for each method are within the acceptable limits.

Notes: \_\_\_\_\_

Parameter	Recovery Outside QC Limits	Batch	Associated Qualified Sample(s)
--	--	--	--

Yes Minimum Detectable Concentrations (MDCs) are provided for radiological samples.

Yes Radiological samples reported below their respective MDC have been qualified with a "U."

Notes: \_\_\_\_\_

Parameter	Associated Samples Below MDC
Radium-226	MWFGDW2, MW-12R, FIELD BLANK
Radium-228	MW-6R, MW-7, MW-10, MW-12R, MW-13, MW-14, FIELD BLANK, DUPLICATE
Total Radium	MW-10, MW-12R, MW-13, MW-14, FIELD BLANK, DUPLICATE

#### 4.0 ANALYTE LISTS/METHODS

- Yes The proper number of constituents are present for each analyte list as identified above (including detects where applicable).
- Yes Proper EPA SW-846 analytical methods were used for analysis.

Notes: \_\_\_\_\_

#### 5.0 OUTLIER EVALUATION

- Yes Analytical results have been evaluated for variances +/- 25% compared to the average of the most recent 8 data points.
- Yes Analytical results with variances >25% have been evaluated for trends.
- NA If no trends were identified for analytical results with variances >25%, a data quality review (DQR) was conducted for suspect analytical results identified as possible outliers. DQR results summarized below.

Analyte	Location	DQR identified issues?	Re-analysis requested?	Outlier Identification
Calcium	MW-7	Elevated concentration reported. No issues with associated blanks.	No	None

#### 6.0 DATA REPORTING

See Note Trip; field and/or equipment; and laboratory blank results have all been reported and the detected constituents in these blanks, if any, have been qualified using professional judgement where detected in other samples.

Notes: The following table presents field blank detections and associated samples that have been qualified. In accordance with EPA guidance, associated samples have been evaluated using professional judgement. Inorganic data less than 10X the blank concentration may be qualified if the detection is not considered part of a visual data trend and is not consistent with recent historical data (i.e. the highest concentration reported over the last 8 sampling events). Organic data corresponding to blank contamination may be qualified if the detection is not considered part of a visual data trend and is not consistent with recent historical data. Additionally, associated samples for organic common lab contaminants (acetone, MC, and MEK) may be qualified if the results are 2X greater than the detected blank concentration. Associated samples may be qualified estimated high (J+), estimated low (J-), non-detect estimated (UJ) or unusable (R). As presented below, data qualification is not recommended.

Sample ID	Parameter	Blank Detection ( $\mu\text{g/L}$ )	Associated Qualified Sample(s)	Validator Qualifier
--	--	--	--	--

Yes It is clear from the laboratory report that samples have or have not been diluted during analysis, and if the samples have been diluted, the result is reported as a multiple of the dilution (e.g., a sample diluted 10x resulting in an analytical detection of 1.0 should be reported as 10).

Yes The report provides the reporting limit for each constituent.

Yes The proper reporting limits have been used (e.g. NC Solid Waste Section approved PQLs, or VA DEQ Permit approved detection limits, as appropriate).

Notes: \_\_\_\_\_

## 7.0 FIELD DUPLICATE PRECISION

Yes Field duplicate sample results were within control limits of 20% relative percent difference for sample results greater than 5 times the quantitation limit. When one or both results were less than 5 times the quantitation limit, the difference between the two results was less than twice the reporting limit.

Notes: The following table presents field duplicates and their associated parent samples that were not within control limits. In accordance with EPA guidance, sample results with field duplicate imprecision may be qualified estimated (J) or non-detect estimated (UJ). As presented below, data qualification is not recommended.

Parameter	Associated Samples	Parent Sample Result ( $\mu\text{g/L}$ )	Duplicate Sample Result ( $\mu\text{g/L}$ )	Reanalysis requested?	Outlier Identification
--	--	--	--	--	--

## Qualifiers

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Rad

Qualifier	Qualifier Description
U	Result is less than the sample detection limit.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Case Narrative

## Job ID: 240-138359-2

### Laboratory: Eurofins TestAmerica, Canton

#### Narrative

#### Job Narrative 240-138359-2

#### Comments

No additional comments.

#### Receipt

The samples were received on 10/15/2020 9:45 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 11 coolers at receipt time were 1.6° C, 1.6° C, 1.7° C, 2.1° C, 2.2° C, 2.3° C, 2.4° C, 3.0° C, 3.2° C, 3.3° C and 3.9° C.

#### RAD

Method PrecSep-21: Radium 226 Prep Batch 160-487338: The following sample was prepared at a reduced aliquot due to a cloudy appearance: MW-12R (240-138359-8).

Method PrecSep\_0: Radium 228 Prep Batch 160-487342: The following sample was prepared at a reduced aliquot due to a cloudy appearance: MW-12R (240-138359-8).

Method 9320: 9320 Prep batch: 160-487342: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. MW-22 (240-138359-1), MW-FGDW2 (240-138359-2), MW-FGDW2 (240-138359-2[MS]), MW-FGDW2 (240-138359-2[MSD]), MW-6R (240-138359-4), MW-7 (240-138359-5), MW-10 (240-138359-7), MW-12R (240-138359-8), MW-13 (240-138359-9), MW-14 (240-138359-10), FIELDBLANK (240-138359-15) and DUPLICATE (240-138359-16)

Method 9315: 9315 Prep Batch: 160-487338: Any minimum detectable concentration (MDC), critical value (DLC), or Safe Drinking Water Act detection limit (SDWA DL) is sample-specific unless otherwise stated elsewhere in this narrative. Radiochemistry sample results are reported with the count date/time applied as the Activity Reference Date. MW-22 (240-138359-1), MW-FGDW2 (240-138359-2), MW-FGDW2 (240-138359-2[MS]), MW-FGDW2 (240-138359-2[MSD]), MW-6R (240-138359-4), MW-7 (240-138359-5), MW-10 (240-138359-7), MW-12R (240-138359-8), MW-13 (240-138359-9), MW-14 (240-138359-10), FIELDBLANK (240-138359-15) and DUPLICATE (240-138359-16)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

11. Sufficient quantity received to perform indicated analyses?  Yes No
12. Are these work share samples and all listed on the COC?  
 If yes, Questions 13-17 have been checked at the originating laboratory.  Yes No
13. Were all preserved sample(s) at the correct pH upon receipt?  Yes No NA pH Strip Lot# HC907861
14. Were VOAs on the COC?  Yes No
15. Were air bubbles >6 mm in any VOA vials?  Larger than this.  Yes No NA
16. Was a VOA trip blank present in the cooler(s)? Trip Blank Lot # \_\_\_\_\_  Yes No
17. Was a LL Hg or Me Hg trip blank present? \_\_\_\_\_  Yes No

Tests that are not checked for pH by Receiving:

## Login Sample Receipt Checklist

Client: Golder Associates Inc.

Job Number: 240-138359-2

SDG Number: Phase B CCR

**Login Number:** 138359

**List Source:** Eurofins TestAmerica, Pittsburgh

**List Number:** 2

**List Creation:** 10/17/20 04:39 PM

**Creator:** Watson, Debbie

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Project Name: Mount Storm Power Station - Phase B - CCR Appendix III & IV Detects

Project Reference Number: 20139936

Sampling Event Date: October 13, 2020

Review Date: 01/06/2021

Initials: CJL

Review Date: 1/13/2021

Initials: RMS

**Person(s) performing the review are to initial each item on this form as acknowledgement of data acceptance, or as acknowledgement of a review issue. In the case of the latter, a brief explanation should follow the applicable item.**

Golder Associates Inc. has reviewed the laboratory certificates of analysis, chain-of-custody form, and laboratory provided sample group quality assurance and quality control data for the above referenced sample group to identify potential bias or inaccuracy, in general accordance with the following United States Environmental Protection Agency (EPA) and Department of Energy (DOE) documents:

- National Functional Guidelines for Inorganic Superfund Methods Data Review, January 2017;
- US Department of Energy Evaluation of Radiochemical Data Usability, April 1997; and
- Sampling and Analysis Plan for US Department of Energy Office of Legacy Management Sites.

#### COMMON ACRONYMS:

- |   |                                     |
|---|-------------------------------------|
| • MS = matrix spike                       | • J = estimated                     |
| • MSD = matrix spike duplicate            | • ND and/or U= not detected         |
| • LCS = laboratory control spike          | • COC = chain of custody            |
| • RPD = relative percent difference       | • QC = quality control              |
| • MB = method blank                       | • µg/L = micrograms per liter       |
| • DUP = duplicate                         | • mg/L = milligrams per liter       |
| • FB = field blank                        | • EPA = United States Environmental |
| • VSWMR = Virginia Solid Waste Management | Protection Agency                   |
| Regulations                               | • pCi/L = picocuries per liter      |

#### COMPLIANCE ANALYTE LIST

- Historical VPDES Parameters
- CCR Appendix III to Part 257
- CCR Appendix IV to Part 257: Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Lead, Lithium, Molybdenum, Selenium, Thallium, Radium
- VSWMR Phase II Parameters: \_\_\_\_\_
- Other: \_\_\_\_\_

Note: TestAmerica Job No.: 240-138359-9

## 1.0 CHAIN OF CUSTODY (COC) REVIEW

- Yes COC was properly signed by all parties.  
Yes Correct project name and number are on the form.  
Yes Sample receipt condition at laboratory was acceptable.  
Yes Each sample and blank submitted for analysis appears in the data report.

Note: \_\_\_\_\_

## 2.0 SAMPLE HOLDING TIMES

- Yes Holding times for extraction and/or analysis were met for each analytical method.

Review Criteria		
Method	Analytes	Holding Time
EPA 9056	Chloride, Fluoride, Sulfate	28 days
EPA 9315 EPA 9320	Radium 226 Radium 228	6 months
EPA 6000 series	Metals	6 months
EPA 7470A	Mercury	28 days
SM2540	Total Dissolved Solids	7 days

Notes: \_\_\_\_\_

## 3.0 LABORATORY QUALITY CONTROL REVIEW

- Yes Laboratory analyzed at least one internal blank for each method, where applicable.  
Yes Laboratory blanks were interference free.

Notes: \_\_\_\_\_

Parameter	Method Blank Detection ( $\mu\text{g/L}$ )	Batch	Associated Qualified Sample(s)	Validator Qualifier
--	--	--	--	--

- NA Surrogate recoveries are provided for each analytical method, where applicable.  
NA Surrogate recoveries for each method are within the acceptable limits.

Notes: \_\_\_\_\_

- Yes Tracer and carrier yields are provided for each analytical method, where applicable (Radiochemical Data Only).

Yes Tracer and carrier yields for each method are within the acceptable limits (Radiochemical Data Only).

Notes: \_\_\_\_\_

Yes MS/MSD/LCS/RPD data results are provided for each analytical method.

Yes MS/MSD/LCS/RPD recoveries for each method are within the acceptable limits.

Notes: \_\_\_\_\_

Parameter	Recovery Outside QC Limits	Batch	Associated Qualified Sample(s)
--	--	--	--

Yes Minimum Detectable Concentrations (MDCs) are provided for radiological samples.

Yes Radiological samples reported below their respective MDC have been qualified with a "U."

Notes: \_\_\_\_\_

Parameter	Associated Samples Below MDC
Radium-226	MW-6R, MW-10, MW-12R, MW-14, MW-22, MWFGDW2, FIELD BLANK, DUPLICATE
Radium-228	MW-6R, MW-7, MW-10, MW-12R, MW-13, MW-14, MW-22, MWFGDW2, FIELD BLANK, DUPLICATE
Total Radium	MW-6R, MW-10, MW-12R, MW-14, MW-22, MWFGDW2, FIELD BLANK, DUPLICATE

## **4.0 ANALYTE LISTS/METHODS**

Yes The proper number of constituents are present for each analyte list as identified above (including detects where applicable).

Yes Proper EPA SW-846 analytical methods were used for analysis.

Notes: \_\_\_\_\_

## **5.0 OUTLIER EVALUATION**

Yes Analytical results have been evaluated for variances +/- 25% compared to the average of the most recent 8 data points.

Yes Analytical results with variances >25% have been evaluated for trends.

NA If no trends were identified for analytical results with variances >25%, a data quality review (DQR) was conducted for suspect analytical results identified as possible outliers. DQR results summarized below.

Analyte	Location	DQR identified issues?	Re-analysis requested?	Outlier Identification
Calcium	MWFGDW2	Elevated concentration reported. No issues with associated blanks.	No	None
Calcium	MW-14	Elevated concentration reported. No issues with associated blanks.	No	None
Cobalt	MW-14	Elevated concentration reported. No issues with associated blanks.	No	None
Sulfate	MW-14	Elevated concentration reported. No issues with associated blanks.	No	None
TDS	MW-10	Elevated concentration reported. No issues with associated blanks.	No	None
TDS	MW-14	Elevated concentration reported. No issues with associated blanks.	No	None

## 6.0 DATA REPORTING

Yes Trip; field and/or equipment; and laboratory blank results have all been reported and the detected constituents in these blanks, if any, have been qualified using professional judgement where detected in other samples.

Notes: \_\_\_\_\_

Sample ID	Parameter	Blank Detection ( $\mu\text{g/L}$ )	Associated Qualified Sample(s)	Validator Qualifier
FIELD BLANK	Boron	32 J	--	--

Yes It is clear from the laboratory report that samples have or have not been diluted during analysis, and if the samples have been diluted, the result is reported as a multiple of the dilution (e.g., a sample diluted 10x resulting in an analytical detection of 1.0 should be reported as 10).

Yes The report provides the reporting limit for each constituent.

Yes The proper reporting limits have been used (e.g. NC Solid Waste Section approved PQLs, or VA DEQ Permit approved detection limits, as appropriate).

Notes: \_\_\_\_\_

## 7.0 FIELD DUPLICATE PRECISION

Yes Field duplicate sample results were within control limits of 20% relative percent difference for sample results greater than 5 times the quantitation limit. When one or both results were less

**QUALITY ASSURANCE & QUALITY CONTROL  
LABORATORY DATA REVIEW**

Project No. 20139936

than 5 times the quantitation limit, the difference between the two results was less than twice the reporting limit.

Notes: The following table presents field duplicates and their associated parent samples that were not within control limits. In accordance with EPA guidance, sample results with field duplicate imprecision may be qualified estimated (J) or non-detect estimated (UJ). As presented below, data qualification is not recommended.

Parameter	Associated Samples	Parent Sample Result (ug/L)	Duplicate Sample Result (ug/L)	Reanalysis requested?	Outlier Identification
