

CCR Rule Semi-Annual Remedy Selection Progress Report

Possum Point Power Station – Ponds ABC Dumfries, Virginia June 2, 2023

Title 40 Code of Federal Regulations (CFR) Section 257.97(a) of the Coal Combustion Residuals (CCR) Rule requires the owner or operator of a CCR unit that has completed a corrective measures assessment for groundwater to prepare a semi-annual report describing the progress in selecting and designing the remedy. This report constitutes the sixth semi-annual remedy selection progress report for the Possum Point Power Station Ponds ABC located in Dumfries, Virginia.

A corrective measures assessment was initiated for Ponds ABC on January 22, 2020, in response to groundwater protection standard exceedances in one or more downgradient groundwater monitoring wells. Pursuant to 40 CFR §257.96, an Assessment of Corrective Measures (ACM) Report was completed and placed in the unit's operating record on June 19, 2020. Based on the results of the corrective measures assessment, Dominion Energy must, as soon as feasible, select a remedy that meets the standards listed in 40 CFR §257.97(b). A summary of the progress selecting a remedy is provided in the selections below.

Summary of Actions Completed to Date

The following interim measures and actions have been completed to date:

- Ponds ABC were closed by removal with an over excavation of an additional six inches, as confirmed by the Virginia Department of Environmental Quality (DEQ) in August 2019;
- The DEQ issued Solid Waste Facility Permit No. 617, which includes requirements for groundwater and surface water monitoring for Ponds ABC. The solid waste permit requires additional monitoring beyond the requirements of the CCR Rule including monitoring of additional constituents in groundwater, additional monitoring wells, and the monitoring of surface water downgradient of the unit. The additional monitoring requirements will further refine the nature and extent of groundwater impacts;
- In April 2020, the DEQ approved Groundwater Protection Standards (GPS) for CCR Rule Appendix IV and additional constituents at Ponds ABC under the solid waste permit. Therefore, semi-annual groundwater monitoring data is now also compared to the DEQ approved GPS;
- Interim backfilling and grading of the area of the former ponds is complete;
- In March 2022, completed additional evaluations of groundwater and soil characteristics in an around Ponds ABC to enhance conceptual site model; and
- Held a public meeting on November 2, 2022, to discuss the results of the corrective measures assessment.

Planned Activities

The following activities are planned:

- Complete backfilling, final grading, and seeding activities;
- Continue to comply with DEQ solid waste corrective action program process for selection of final remedy; and
- The next semi-annual progress report will be completed no later than November 29, 2023.
