Cottage Park Substation Grid Transformation Project

AT DOMINION ENERGY, we are committed to updating you on projects in your neighborhood. You are receiving this postcard because we are preparing to begin construction at Cottage Park Substation on Grove Avenue in Norfolk as part of our Grid Transformation Plan. This work will improve reliability and better integrate renewable energy resources for our customers.

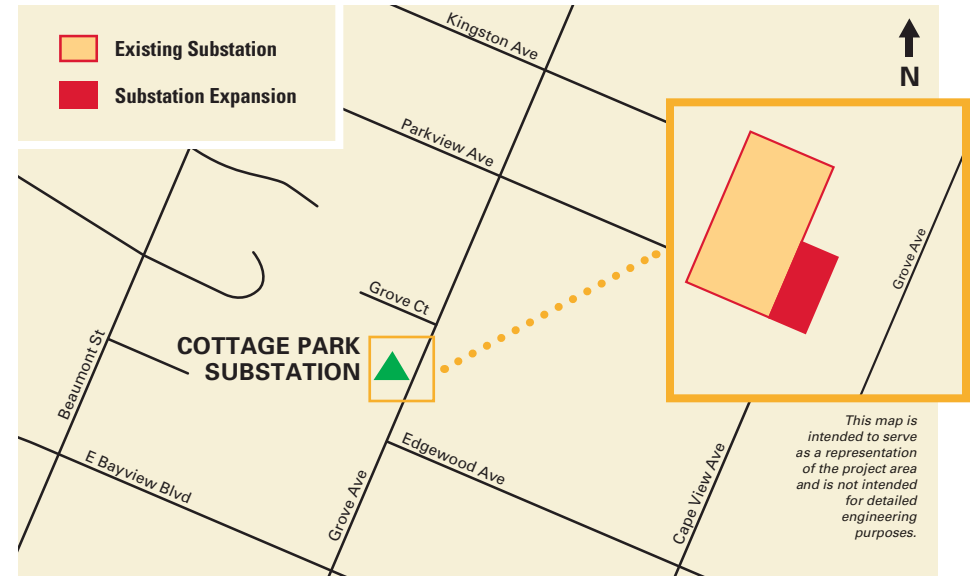

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve. Learn how we're keeping you safe at powerlines101.dominionenergy.com.

Beginning in August 2023, crews will upgrade equipment, install new technology, and expand a portion of the fenced area by approximately 22' by 60' at Cottage Park Substation. There will be increased

construction vehicles and foot traffic in the area until the project is completed in spring 2024. During this time, we will be mindful of our presence in the neighborhood and do our best to mitigate impacts to the community.

We will continue to update you as activities progress. Thank you for your patience and understanding as we work to enhance grid reliability in your community.

CONTACT US — To learn more about Grid Transformation Plan substation projects, please visit DominionEnergy.com/gtsubs for project updates. Or contact us by calling 888-291-0190 or sending an email to powerline@dominionenergy.com.

Substation Technology Deployment

Dominion Energy is modernizing substations by upgrading certain components which will help improve reliability, maintain voltage stability, and increase overall visibility of grid operations. This will help with outage response, renewable resource integration, and electric vehicle charging.
