

Actions Speak Louder

Valued Dominion Energy Customer:

Dominion Energy is transforming our power grid and the way we think about energy. We are investing in our electric distribution system to ensure the grid is stronger, smarter, and more resilient.

As part of our Grid Transformation Plan, we are identifying locations across our service territory where we can make improvements to the electric facilities, resulting in increased energy efficiency and helping to reduce our carbon footprint. Additionally, the data received from our smart metering technology in these areas allows us to achieve more stabilized voltage levels, resulting in more efficient energy consumption for our customers.

You may see our trucks or authorized contractors working in your area. Please be mindful of our crews and equipment for your safety and others. **You can learn more about Dominion Energy's Grid Transformation Plan and the Voltage Optimization Program at [DominionEnergy.com/VoltageOptimization](https://www.dominionenergy.com/voltageoptimization).**
