Aviator 230 kV Substation and Electric Transmission Line Project

AT DOMINION ENERGY, we are committed to informing you of our activities in your community. This postcard serves to update you on our plans to build a new Aviator 230 kilovolt (kV) Substation and

transmission line, as authorized by the State Corporation Commission (SCC). This project will serve increased energy needs in eastern Loudoun County, Virginia, and will improve electric reliability for all customers in the area.

We will connect the new Aviator Substation with our existing Poland Road Substation by constructing a new 230 kV double-circuit transmission line loop. We are scheduled to begin soil boring activities in February. Soil borings help ensure foundations will provide adequate stability for transmission structures. You may notice our

crews or contractors accessing properties along the right of way corridor. The soil boring process involves using equipment to drill holes, sample the soil, and assess its makeup. The holes will be refilled.

After we receive all necessary permits and approvals, construction is scheduled from June 2023 to fall 2024.

We will update you as activities progress. Thank you for your patience as we complete this important project.
