BECO to DTC 230 kV Electric Transmission Line and Substation Project – Forestry Activities

AT DOMINION ENERGY, we continually review and analyze our energy infrastructure to provide safe and affordable electricity to our neighbors. Rapid growth in electrical demand, particularly in the commercial sector of eastern Loudoun County, has resulted in the need to build a new substation.

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve. Learn how we're keeping you safe at powerlines101.dominionenergy.com.

It will be named DTC and be located off Atlantic Boulevard near Route 28. We will connect DTC Substation to our existing BECO Substation by building a new overhead 230 kilovolt (kV) electric transmission line (approximately 1.3 miles), as authorized by the State Corporation Commission (SCC). This project will improve electric reliability for all customers in the region.

You are receiving this postcard because we are preparing the DTC site for construction. You can expect to see tree felling this month.

After we receive all necessary permits and approvals, we plan to begin substation and transmission line construction in the spring. The new transmission line is projected to be in service by the end of 2024, and we anticipate DTC Substation to be complete by summer 2025.

We will update you as activities progress. Thank you for your patience and understanding as we complete this important project.
