# Upcoming Transmission Line Surveys: New Technology

## Bristers-Minnieville Electric Transmission Rebuild Project

At Dominion Energy, we are committed to working safely and respectfully in the communities we serve. You are receiving this postcard so we can provide an update on the 115 kilovolt (kV) electric transmission line rebuild project between Bristers and Minnieville substations.

In late March, a certified pilot will use an FAA-registered drone to conduct danger tree surveys along the 15.2-mile project corridor.

Danger trees are located outside the right of way but have the potential to fall within 10 feet of the transmission line. Utilizing drones to identify danger trees is safe, efficient, accurate, and leaves a small carbon footprint. Removing these trees is necessary to maintain safe and dependable electric service in your community.

The upcoming drone activities will prepare us for the next phase of construction activities, which will begin in late 2024. Thank you for your patience.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.
