## Buena Vista-Balcony Falls 115 kV Electric Transmission Line Rebuild

AT DOMINION ENERGY, we are committed to continually reviewing and analyzing our energy infrastructure to provide safe, reliable, and affordable electricity to our neighbors. We are currently preparing to rebuild a 115 kilovolt (kV) electric transmission line between our Buena Vista and Balcony Falls substations in the city of Buena Vista and Rockbridge County, Virginia.

After nearly 10 decades of reliable service, the structures and related components on this 10-mile line are at the end of their service life and need to be rebuilt to bring facilities up to current reliability and safety standards.

Throughout the next few months, our crews and contractors will be in the right of way corridor collecting information as we develop our plans for this important project. You can expect to see our crews and contractors on foot or in vehicles accessing the right of way, which may include the use of access roads outside the right of way. In the wake of the coronavirus, we are committed to safety and maintaining property owner interactions with the appropriate social distancing.

Once all necessary permits and approvals are received, we anticipate construction to begin in summer 2023. We will continue to keep you informed as activities progress.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

### WHAT:

This project will rebuild the existing 115 kV Buena Vista-Balcony Falls electric transmission line.

### WHY:

The existing galvanized steel lattice structures were originally installed in 1928. We are planning to replace these structures with brown, weathering-steel H-frame structures in the same general location as existing structures.

### WHERE:

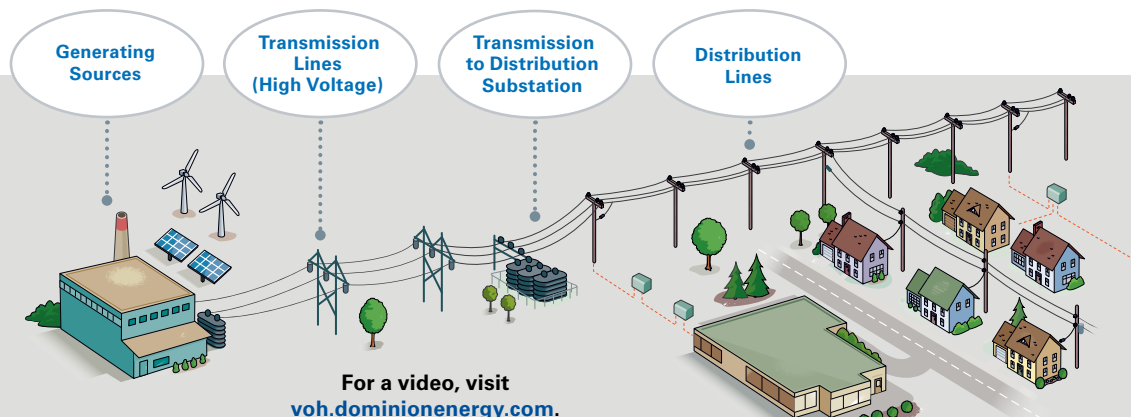

This 10-mile line is located in the city of Buena Vista and Rockbridge County, Virginia. The line runs through the George Washington National Forest for about 2.5 miles.

### TIMELINE

- March 2021 — Announce project to community
- Q2 2020 – Q2 2023 — Develop project plans and coordinate with localities and stakeholders
- Q3 2023 — Begin construction
- Q4 2024 — Complete construction
- Q1/Q2 2025 — Complete restoration

### Delivering Clean, Safe, Affordable and Sustainable Energy

Transmission lines are the tall, high-voltage lines that carry electricity over long distances from power generation facilities to substations.
