Cemetery Road 115 kV Substation Project

AT DOMINION ENERGY, we are committed to keeping you informed about our activities in your community. You are receiving this postcard to update you on our plans to build a new Cemetery Road 115 kilovolt (kV) Substation southeast of Chase City in Mecklenburg County, Virginia. This project is intended to serve a proposed natural gas compressor station and will improve electric reliability for all customers in the area.

We are scheduled to begin soil boring activities at the planned substation site in the next few weeks. Soil borings help ensure foundations will provide adequate stability for substation equipment and transmission structures. You may notice our crews or contractors accessing properties along the right of way corridor. The soil boring process involves using equipment to drill holes, sample the soil, and assess its makeup. The holes will be refilled.

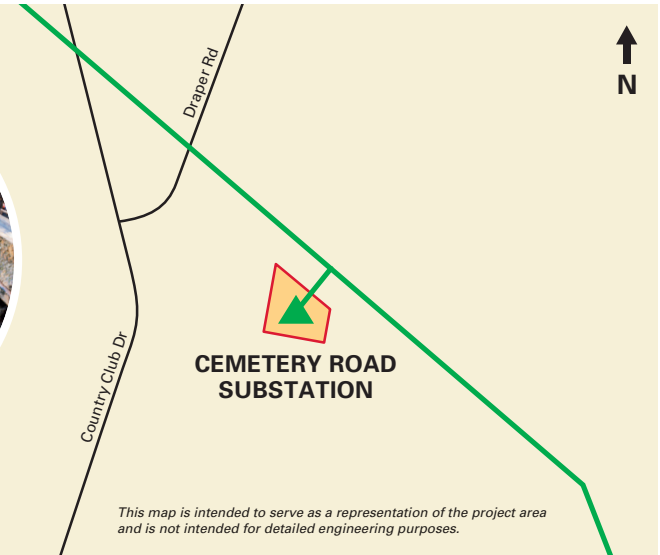

After all necessary permits and approvals are received, we expect site preparation to begin in early 2024. Substation and transmission line construction will take about nine months and is scheduled to begin in winter 2024 and end in fall 2024.

We will update you as activities progress. Thank you for your patience and understanding as we complete this important project.
