

Welcome to the overview of Dominion Energy's Chase City to Cloud 230-kilovolt rebuild project.

This project will address electric transmission infrastructure along a 13-mile corridor in Mecklenburg County. Dominion Energy will be upgrading the 115-kilovolt line to 230-kilovolt standards to better accommodate economic expansion and meet datacenter demand. The Chase City to Cloud 230-kilovolt Rebuild Project will begin at the Chase City Substation and make its way southeast towards the Cloud substation, near Boydton, VA. This line will cross the tobacco heritage trail near the southern end of the line.

At Dominion Energy, we are committed to continually reviewing and analyzing our energy infrastructure to provide the safest and most reliable electric service possible.

Three primary forces drive the need for new electric transmission infrastructure:

- Economic development, such as population growth or business expansion
- Aging assets, such as decades old structures that need to be replaced
- And complying with mandatory standards to ensure safety and reliability

These drivers often overlap, and at Dominion Energy, we believe solutions should always account for future energy needs while continuing to balance cost and impacts.

A strong, reliable transmission grid is essential to deliver energy to all parts of Virginia. The electric grid is made up of high-voltage lines functioning as energy highways. These transmission lines transport power over long distances from generating stations, that include solar and wind power, to substations, which then feed distribution lines that energize homes and businesses.

The Chase City to Cloud 230-kilovolt rebuild will primarily take place in existing rights-of-way and will also involve the clearing of some trees to expand the right of way. Rebuilding the line will allow Dominion Energy to continue to comply with mandatory standards that ensure continued safety of the electric grid. This 15-mile rebuild project allows Dominion Energy to maintain reliability for the customers these lines serve.

Construction will begin during the first quarter of 2023. New double circuit steel poles will be placed in the right of way along existing transmission line. Crews will begin work at the Chase City Substation. The target completion date for this project is June 2024.

While planning our projects, we know the importance of gathering community feedback to inform decisions. We know that keeping construction, environmental, and visual impacts to a minimum are important to you. At Dominion Energy, we know that Actions Speak Louder. Across every part of our company, we are transforming the way we do business to build a more sustainable future for the planet, our customers, our team, and our industry. Maintaining environmental stewardship is a responsibility we take seriously.

Dominion Energy is guided every day by a core set of values to ensure projects are successful from start to finish. We work safely, execute our jobs ethically, strive for excellence, foster innovation by welcoming new ideas, and employ strong teamwork with our colleagues and in the communities we proudly serve.
