Loudoun - Ox 230 kV Electric Transmission Partial Rebuild Project

Dear Neighbor:

At Dominion Energy, we are committed to keeping you informed of projects in your community. We are writing today to provide an update on the Loudoun to Ox 230 Kilovolt (kV) Partial Rebuild Project. This rebuild replaces aging infrastructure and will maintain the structural integrity and reliability of the electric grid.

As a reminder, this project is being completed in four phases. The first three phases have been completed and the work sites are being restored to their previous conditions. You are receiving this letter because your property is located within the final phase of the project area. This phase begins at the NOVEC Substation at the corner of Henderson Road and Clifton Road in Clifton and terminates at Ox Substation. In this section, crews will replace approximately 5.5 miles of existing 230 kV structures with new double circuit structures.

Last month we performed tree work in this portion of the project. In July, we will begin building temporary access roads so crews can safely deliver materials to the job site. Later this summer, you may notice increased traffic, noise, and localized congestion as structure foundation work commences and crews continue their pre-construction activities.

We expect construction to be complete by December 2024. Following completion of the project, crews will restore the site to its previous condition. Restoration is scheduled to be complete in spring of 2025.

In our ongoing efforts to keep you informed, we encourage you to read the construction brochure included with this letter and to visit our website at [DominionEnergy.com/l-ox](https://www.dominionenergy.com/l-ox). You may contact us by sending an email to powerline@dominionenergy.com or by calling 888-291-0190.

Sincerely,

The Electric Transmission Project Team
