Nebula-Raines (formerly Cloud-Raines) 230 kV Electric Transmission Line Project

At Dominion Energy, we are committed to providing safe, reliable, and secure energy to the communities we serve. We are dedicated to meeting our customers' needs while evaluating the impact of local economic growth that can contribute to increased electrical demand. The Nebula-Raines 230 kV Electric Transmission Project will address the increased electrical demand by constructing new 230 kilovolt (kV) transmission line on new right of way connecting new infrastructure in the Chase City/Boydton area to new infrastructure in South Hill.

MORE

This project is in the early design stages and we would like to involve you in our planning process. To learn more about this project, consider joining us at our community meetings. You will be able to review the routing options and meet with project team members. Our first meeting is in July. Once we receive your input and incorporate it into project planning, we will host another in-person meeting later this summer in August.

We look forward to your attendance and will continue to engage the community in our project development.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at powerlines101.dominionenergy.com.
