

Because electricity should be as reliable as the tides.

Upgrading the Norris Bridge transmission line will help meet the Northern Neck's demand for electricity into the future.

The 52-year-old Norris Bridge line provides power to more than 20,000 people in Lancaster and Northumberland Counties—as well as to the surrounding area in the Northern Neck peninsula. At Dominion, we want to ensure the uninterrupted delivery of electricity to this region by rebuilding the line. And, as part of our ongoing efforts to keep costs low and reliability high, we carefully evaluated many alternatives. Providing safe and reliable electricity to the area in an environmentally friendly, cost-effective manner has and continues to be Dominion's steadfast commitment.
