Remington-Gordonsville 115 kV/230 kV Electric Transmission Line Rebuild Project

AT DOMINION ENERGY, we are committed to providing safe, reliable, and affordable electric service to our neighbors. We are pleased to inform you that final restoration is complete on the Remington-Gordonsville 230 kV/115 kV Electric Transmission Line Rebuild Project in Fauquier, Culpeper, Orange, and Louisa counties, Virginia.

The existing single-circuit 115 kV structures were replaced with new brown, weathering steel double-circuit structures. The completion of this project helps improve electric reliability by replacing aging infrastructure, maintaining compliance with federal reliability standards, and accommodating growth and development in the communities served by the line.

We appreciate your patience and understanding throughout the duration of this project.

In addition, we want to inform you that in the wake of ongoing public health concerns from the spread of the coronavirus, we are mindful of our activities and maintaining property owner interactions with the appropriate social distancing. The work we do is integral to maintaining grid reliability and our crews will continue to perform work as needed to provide reliable energy.
