## Hathaway to Rocky Mount 230 kV Electric Transmission Line Rebuild Project

At Dominion Energy, we provide the reliable, affordable, and increasingly clean energy that powers our customers every day. You are receiving this postcard to update you on the Hathaway to Rocky Mount 230 kilovolt (kV) Electric Transmission Line Rebuild Project. To meet current electric standards and maintain reliable service, this project will rebuild approximately 3.9 miles of an aging double-circuit electric transmission line in Nash County, North Carolina. This project will replace the existing weathering steel lattice structures with galvanized steel monopoles in the same right of way.

MORE

We completed Phase I of this project between our Hathaway and Nash substations last year. In March, Phase II construction begins between our Nash Substation and the Duke Energy Progress connection point in Rocky Mount, North Carolina.

In early April, we plan to install new wires over Route 301 (North Wesleyan Boulevard) near the Thomas A. Betts Parkway intersection. Temporary traffic delays (less than 15 minutes at a time) are possible during this daytime overhead work. Please follow posted signage and traffic instructions. We are committed to working safely and swiftly to minimize travel disruptions.

Area restoration will occur in summer and fall 2024. Your electric service is not expected to be interrupted as a result of this project. Thank you for your patience and understanding while we work in your community.

Protecting the grid against natural and man-made acts is a top priority. You can learn more about our commitment to safety at [powerlines101.dominionenergy.com](https://powerlines101.dominionenergy.com).

## UPCOMING WORK

MARCH – JUNE 2024

Rebuild transmission line between Nash Substation and the Duke Energy Progress connection point

SUMMER – FALL 2024

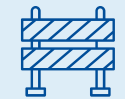

Restoration of the right of way
