Shawboro – Elizabeth City 230 kV Electric Transmission Line Rebuild Project

AT DOMINION ENERGY, we are dedicated to maintaining safe, reliable, and affordable electric service in the communities we serve. You are receiving this postcard because we are preparing to rebuild an aging 230 kilovolt (kV) electric transmission line between our Shawboro and Elizabeth City substations. This project spans approximately 10.3 miles in the North Carolina counties of Pasquotank, Currituck, and Camden. No new right of way is needed.

After nearly five decades of dependable service, the existing structures and components are at the end of their service life and need to be replaced. We will rebuild the wooden H-frame and three-pole structures using weathering steel that is similar in appearance.

This summer, our crews will access the right of way on foot or in vehicles when they survey the electric transmission corridor. Surveys may include collecting small soil and/or vegetation samples. Any holes will be refilled after surveying is complete.

After all necessary permits and approvals are received, we plan to begin preconstruction activities in summer 2024. Construction is expected to occur from summer 2024 to spring 2025.

Your electric service is not expected to be interrupted as a result of this project. We will update you as the project progresses. Thank you for your patience and understanding as we work to maintain electric reliability for all our customers.

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve. Learn how we're keeping you safe at powerlines101.dominionenergy.com.
