We are planning work in your community

Thrasher Junction – Thrasher Substation Fiber Project

At Dominion Energy, we continually review our infrastructure to provide reliable, affordable, and increasingly clean energy that powers our customers every day. You are receiving this postcard because we are preparing to install fiber on an existing electric transmission line between our Thrasher Substation and near the Thrasher Junction located in the City of Chesapeake, Virginia. This project will improve communications between substations and provide the necessary resiliency and security to operate and monitor the bulk power system.

After surveying the transmission line, we decided to extend the northern work end point by approximately 675 feet. This will minimize our work impacts for neighbors who back up to the transmission line between Allison Drive and Holly Berry Lane.

There are several different Dominion Energy projects occurring in the Allison Drive area. For assistance with the distribution fiber project on the west side of Allison Drive, please call 1-866-366-4357. For assistance with the Strategic Underground Program distribution power project (SUP Work Request # 10284692), please contact Tracey Brown by email at Tracey.T.Brown@dominionenergy.com. For assistance with your electric transmission easement or if you have questions about an identified encroachment, please contact the Dominion Energy Electric Transmission Rights of Way Management group at etrow@DominionEnergy.com, call 1-800-215-8032, or visit DominionEnergy.com/RightOfWay to learn more.

Your electric service is not expected to be interrupted due to this transmission fiber project. Thank you for your patience and understanding as we complete this important work.

Protecting the grid against natural and man-made acts is a top priority. Visit powerlines101.dominionenergy.com to learn more about our commitment to safety.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

PROJECT TIMELINE

- SUMMER 2024**
Prepare access to transmission structures
- LATE SUMMER – LATE FALL 2024**
Install fiber on transmission structures (in some areas, we plan to access towers on foot and climb)
- WINTER 2024 – 2025**
Restoration activities in right of way
