Skiffes Creek – Waller – Lightfoot 230 kV Electric Transmission Line Rebuild Project

AT DOMINION ENERGY, we are committed to providing safe, reliable, and affordable electric service to the communities we serve. You are receiving this postcard because construction is scheduled to begin on the Skiffes Creek-Waller-Lightfoot 230 kV Electric Transmission Rebuild Project in Williamsburg, York County, and James City County, Virginia. This project is necessary to replace aging infrastructure and to ensure reliable electric service for this region for decades to come.

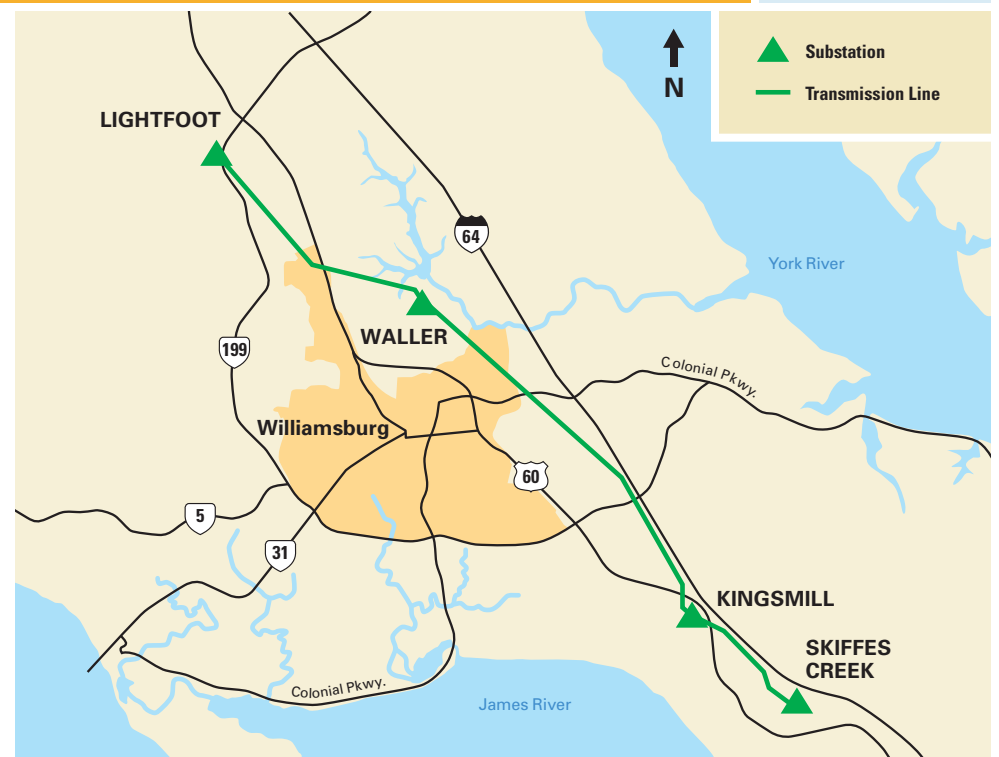

AT DOMINION ENERGY, protecting the grid and making it secure against natural and man-made acts is a top priority. We work alongside government officials to prepare for potential incidents that could affect our ability to provide electricity safely and reliably to the communities we serve. Learn how we're keeping you safe at powerlines101.dominionenergy.com.

Beginning this summer, crews and contractors will be in the right of way corridor preparing for construction. You can expect to see personnel on foot or in vehicles accessing the right of way, which

may include use of access roads outside the right of way, to clear trees and brush, lay wooden matting to protect vegetation, and build access roads to reach the structures.

Your electric service is not expected to be interrupted as a result of this project. We are committed to working diligently, swiftly, and safely to complete this critical project and will make every effort to be respectful of our neighbors.

CONTACT US — Visit our website at DominionEnergy.com/waller for project updates. Or contact us by sending an email to powerline@dominionenergy.com or calling 888-291-0190.

This map is intended to serve as a representation of the project area and is not intended for detailed engineering purposes.

WHAT:

We will replace aging infrastructure with new electrical equipment as follows:

- Replace wooden H-frame structures with weathering steel H-frame structures from our Lightfoot to Waller to Kingsmill substations and remove an existing 115 kV transmission line.
- Rebuild the existing transmission line between our Kingsmill and Skiffes Creek substations using double-circuit weathering steel H-frame structures.
- No new right of way is needed.

WHY:

After five decades of reliable service, the existing structures and related components on this line are at the end of their service life and need to be replaced to meet current electric reliability, compliance requirements, and safety standards.

WHERE:

The approximately 13-mile right of way is between our Waller, Lightfoot and Skiffes Creek substations in Williamsburg, York County, and James City County, parallel to Interstate 64. Construction activities begin at Skiffes Creek Substation and work northwest to Waller Substation and finally to Lightfoot Substation.

TIMELINE

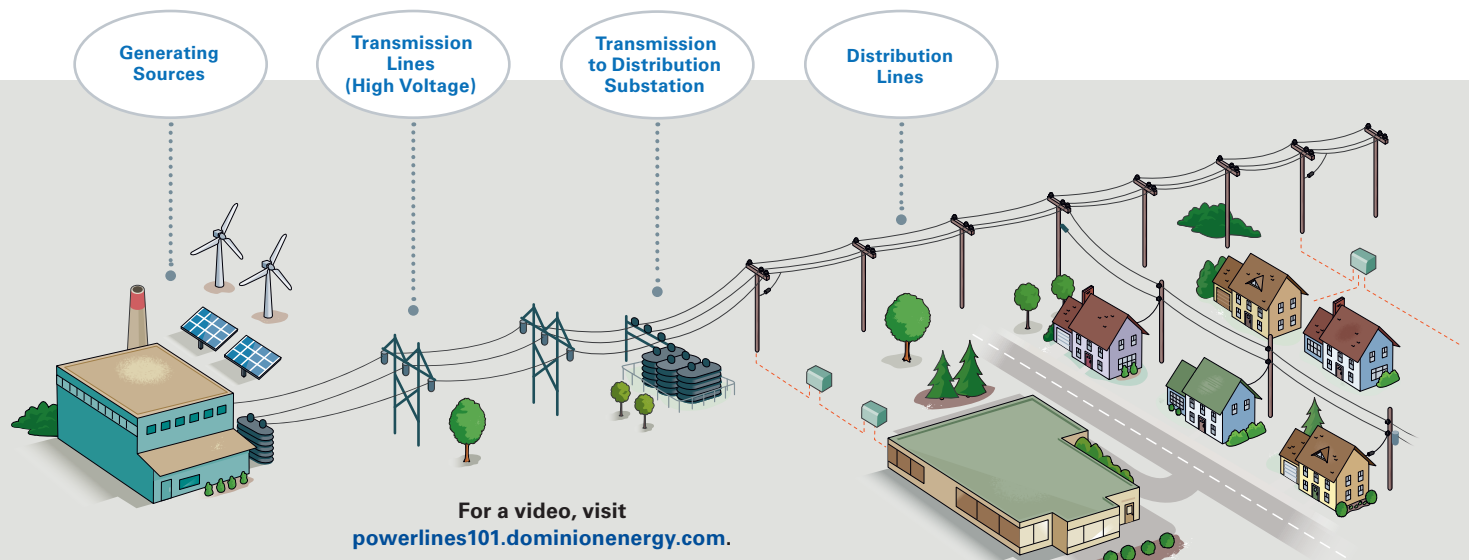

SUMMER 2022 – SPRING 2023 — Construction activities between Skiffes Creek and Waller

WINTER – SUMMER 2023 — Construction activities between Waller and Lightfoot

SUMMER 2023 – WINTER 2024 — Restoration activities

Delivering Clean, Safe, Affordable and Sustainable Energy

Transmission lines are the tall, high-voltage lines that carry electricity over long distances from power generation facilities to substations.
