

T15 Reliability Project

PROJECT SUMMARY

Because of increasing demand for natural gas in the region, Dominion Energy North Carolina (DENC) will install a new pipeline to meet growth and continue providing safe and reliable service. DENC will install the pipeline from Eden to Roxboro beginning as early as 2025 to provide additional natural gas supply and system flexibility needed to serve homes and businesses as the region continues to grow. The pipeline would also support the need for additional natural gas in the region while helping reliably meet the state's carbon reduction goals.

Safety

Monitored 24 hours a day, 7 days a week, using sophisticated computer and telecommunications equipment at Dominion Energy's gas control centers

Reliability

Natural gas reliability during the coldest days

Economic Benefits

Increased spending at local businesses during construction and future economic development support

How safe are these projects?

From construction through operations, safety is the top priority. DENC maintains construction and operating policies and procedures that adhere to state and federal safety requirements that provide specific directions in inspection, testing, operation, preventive maintenance, repair and vigilant patrols of facilities. Local DENC employees will operate and maintain the pipeline once it is in service.

What about the environmental impacts?

DENC is committed to being a good steward of the environment and following all permit specifications. Because DENC is paralleling the new pipeline on existing pipeline right-of-way, this helps reduce environmental impacts.

Why are you building this pipeline?

The T15 project will ensure continued compliance with safety regulations and reliably meet demand for natural gas. The project was planned before generation needs were proposed, but the diameter size of the pipeline has increased to accommodate the demand for natural gas in the region.

Where would the compression station be located?

DENC owns and operates a compressor station in Ruffin and plans to build a new one close by.

PROPOSED TIMELINE

Planning & Development, 2023
Permitting, 2024-2025
Design & Procurement, 2025
Construction, 2025 – 2027
