

## Considerations for Plantings on Dominion Energy Right-of-Way

**Vegetation that might exceed 10 feet is not permitted on electric transmission right of ways. Plantings exceeding 15' in height are subject to removal on distribution right of ways. Anything planted directly under power lines may require pruning.**

- Choose off-right-of-way plants that will not grow so tall that they could fall into the power line within the right-of-way.
- Trees planted off the right-of-way that grow onto the right-of-way will be pruned to the extent that their limbs are no longer on the right-of-way and may need to be removed.
- To reduce future pruning of plantings off the right of way, consider selecting trees with small crowns and mature heights less than 25 feet when planting adjacent to the right-of-way.

Below is a list of plants that generally will not grow taller than 15 ft. at their maturity. Plantings in elevated areas, such as berms and planters, and in right of way access areas regardless of height are subject to removal. Please note that this list is in no way inclusive; many additional plants are available.
