

Dominion Energy delivers natural gas to more than 1.2 million customers in Ohio. We're a leader in the clean energy transition, with a clear strategy to achieve net-zero carbon and methane emissions by 2050. We invest in communities where we live and work, and protect our natural resources. Visit **DominionEnergy.com** to learn more.

PASSING ON THE IMPORTANCE OF SUSTAINABILITY

- Dominion Energy passes on the importance of sustainability for future generations through its partnership with the Ohio Energy Project (OEP). The e³ Smart Program provides teachers in Ohio with the curriculum to fundamentals of energy, why it's important to conserve it and how to become more energy efficient.
- Through the Dominion Energy Charitable Foundation, we fund grants to Ohio nonprofits for education and stewardship projects that preserve, enhance or make nature more accessible.

INVESTING IN INNOVATIVE AND SUSTAINABLE ENERGY SOURCES

Hydrogen

Hydrogen produces few or zero greenhouse gas emissions. In 2022, the company started a pilot project to test a 5% hydrogen blend at our Ohio training facility. This project will help us learn how hydrogen works in our system and with natural gas appliances before we begin to blend hydrogen in our customers' homes and businesses.

Dominion Energy is one of the founding members of the Ohio Clean Hydrogen Hub Alliance formed to promote the economic and environmental benefits to Ohio from the federal government's commitment to clean hydrogen technology.

Dominion Energy is a partner in the Appalachian Regional Clean Hydrogen Hub (ARCH2), which is pursuing development of a regional clean hydrogen hub in Ohio, Pennsylvania, West Virginia and Kentucky. ARCH2 will serve as a network of local hydrogen production, storage and demand. Recently, the Department of Energy announced ARCH2 is one of seven regional hubs across the U.S. to receive a federal funding award to support the development of a clean hydrogen hub.

Renewable Natural Gas

Dominion Energy is harnessing renewable natural gas (RNG) from Ohio landfills. Decomposing organic material found in landfills produces methane gas that's processed and blended into the existing natural gas system for consumer use. Projects are underway in Stark and Tuscarawas counties.
