Heating & Cooling New Equipment Rebates

If your heating and cooling equipment fails, we can help!*

Replacing a Heat Pump or Air Conditioner?

Rebates **up to \$500** for the purchase and installation of ENERGY STAR® qualified central air conditioners and heat pumps in existing homes.

Replacing an Electric Furnace? Get a \$650 rebate when you replace your electric furnace with a new ENERGY STAR® qualified heat pump.

Making Ductwork Improvements? \$300 rebates available for duct sealing, duct insulation or complete replacement.

Need a New Water Heater? Get a \$750 rebate to install a new ENERGY STAR® certified heat pump water heater.

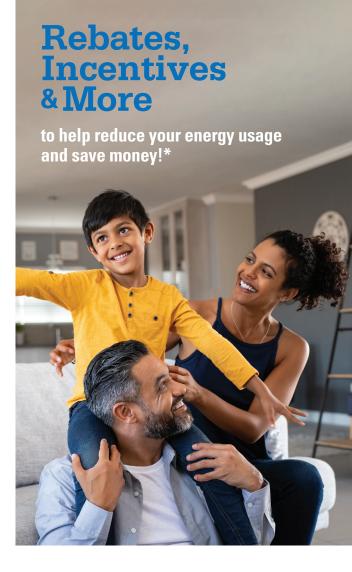

*IMPORTANT NOTE: EnergyWise programs are available to Dominion Energy South Carolina residential electric customers. See website for eligibility requirements and restrictions, including Terms and Conditions where applicable.

Tips to Help You Save!

- Set your thermostat at 68°F or lower in the winter and 78°F or higher in the summer. Each degree higher or lower can significantly increase your heating costs in winter and cooling costs in summer.
- Install a smart thermostat for added convenience. This will allow you to automatically raise or lower the temperature settings when you're asleep or away from home. Make sure the thermostat is compatible with your HVAC system.
- Check air filters monthly and change when dirty. Leave interior doors open and don't close vents to allow adequate air flow through your HVAC system.
- Periodically check your ductwork for leaks or tears.
 Repair fallen or crushed ductwork and use mastic
 (a plaster-like substance found at your local hardware store) to seal leaks.
- Have your central heating and cooling system serviced annually by a professional. This can extend the life of the system while maintaining optimum efficiency.
- Upgrade your attic insulation to a minimum of R-38 (12-14 inches), which can help save on heating and cooling costs.
- Caulk, seal, and weather-strip around all seams, cracks and openings to protect against drafts. Pay special attention to windows and exterior doors.
- Set your water heater at 120°F and visually inspect the unit for leaks periodically.
- Replace standard incandescent light bulbs with ENERGY STAR® LEDs, which are 90 percent more efficient than incandescent bulbs.
- Unplug appliances, lights, TVs, computers, etc. when not in use or consider installing advanced power strips.
