

Stay cozy and warm all season long.

Have your furnace inspected by a
licensed heating contractor.

It's important that your furnace is properly adjusted for altitude and operating correctly before its "busy season" begins.

Other tips to keep your furnace running safely and efficiently this winter:

- ✓ Check your furnace filter regularly and replace it if necessary.
 - ✓ Give your furnace some space. Your furnace performs best when it has room to breathe.
 - ✓ Don't store any flammable materials near your furnace.
 - ✓ Install a smart thermostat. This will help out your furnace and your wallet.
 - ✓ Move furniture, drapes and anything else obstructing air ducts and cold-air returns. Blocked vents mean poor air flow and excess stress on your furnace.
-
