

Charging on the Go

Dominion Energy is making **EV charging** easier and more affordable for businesses and multifamily communities.

Smart

Guides, interactive tools, calculators, programs and **incentives** to support electrification

Convenient

Monthly on-bill payments reduce upfront costs for EV charging infrastructure

Equitable

No-cost charging solutions available to eligible customers in underserved areas

Flexible

EV charging hardware and software options to meet specific customer needs

What are the benefits of EV charging for businesses and multifamily communities?

Installing EV charging at your business can help attract and retain employees and customers, increase time spent at your location, and contribute to sustainability goals. For multifamily communities, EV charging provides a valuable amenity for current and future tenants.

What types of solutions are available for businesses and multifamily communities?

- **Level 2 Charging Program:** provides turn-key EV charging infrastructure, installation, and maintenance and gives customers control of their own charging operations.
- **Level 2 and Fast Charging Pricing Programs:** gives customers the option to host an EV charging station while we handle all of the costs, installation, and maintenance.

What incentives are available?

Customers participating in the Level 2 Charging Program receive a **50% upfront incentive** on EV charging construction and installation, commonly referred to as “make-ready.” Customers make convenient, monthly on-bill payments for the remaining costs. There may also be grants and tax incentives available.

How can I get started?

Visit [DominionEnergy.com/EV](https://www.dominionenergy.com/ev) to learn more. Submit an interest form on our website to have one of our EV experts contact you directly.
